

DJ SPARK

The D J Spark is an annual project-based competition where students are provided with a golden opportunity of exhibiting technical skills as well as competing at multiple fronts with their peers from all across Maharashtra. In order to participate in D J Spark, one has to send across a technical paper of any on-going project or any other project idea which they aim to execute. The technical paper should be in accordance with the IEEE format. After sending the technical paper at the mentioned email-address, they will be subjected to scrutiny and assessment by the reviewers in respective fields. The short-listed teams will then be given a chance to display their projects at our very own college. In addition to this, their paper based on project will also be published in proceedings of D J Spark which carries valid ISBN Number, irrespective of whether the team wins the competition, which holds immense value for any engineering student. On the contrary, those who win the competition are awarded cash prizes and other exciting prizes. D J Spark proves to be an inspiration to budding engineering students, lures them into amplifying their knowledge, and engages them in application based learning which in turn helps them flourish. It motivates students to step outside of their comfort zones and build something innovative, which would cater to an array of applications and at the same time bring about a change in the world. Competitions like D J

Spark play a lucrative role in filling the void between theoretical learning and practical application.

For D J Spark 2020 a tremendous response of 60 plus papers was received. Following a rigorous review process, 8 Outhouse & 19 In-house papers were selected and published.
