UNIVERSITY OF MUMBAI

Bachelor of Engineering

Computer Engineering
( Sem. V to VIII)

Revised course

(REV- 2012) from Academic Year 2014-15,

Under

FACULTY OF TECHNOLOGY

(As per Semester Based Credit and Grading System)
Preamble

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEO’s) and give freedom to affiliated Institutes to add few (PEO’s) and course objectives and course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner’s learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, semester based credit and grading system is also introduced to ensure quality of engineering education.

Semester based Credit and Grading system enables a much-required shift in focus from teacher-centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes and Faculty of Technology has devised a transparent credit assignment policy and adopted ten points scale to grade learner’s performance. Credit and grading based system was implemented for First Year of Engineering from the academic year 2012-2013. Subsequently this system will be carried forward for Second Year Engineering in the academic year 2013-2014, for Third Year and Final Year Engineering in the academic years 2014-2015 and 2015-2016 respectively.

Dr. S. K. Ukarande
Dean,
Faculty of Technology,
Member - Management Council, Senate, Academic Council
University of Mumbai, Mumbai
Preamble:

The engineering education in India in general is expanding in manifolds. Now, the challenge is to ensure its quality to the stakeholders along with the expansion. To meet this challenge, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education and reflects the fact that in achieving recognition, the institution or program of study is committed and open to external review to meet certain minimum specified standards. The major emphasis of this accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

The Program Educational Objectives finalized for undergraduate program in Computer Engineering are listed below:

1. To prepare Learner’s with a sound foundation in the mathematical, scientific and engineering fundamentals
2. To prepare Learner’s to use effectively modern tools to solve real life problems
3. To equip Learner’s with broad education necessary to understand the impact of computer Technology in a global and social context
4. To encourage, motivate and prepare Learner’s for Lifelong-learning
5. To inculcate professional and ethical attitude, good leadership qualities and commitment to social responsibilities

In addition to above 2 to 3 more program educational objectives of their own may be added by affiliated Institutes.

The Program outcomes are the skills and ability that Learner will demonstrate upon completion of undergraduate degree program in Computer Engineering. Few may be listed as follows:

1. Ability to effectively apply knowledge of computing and mathematics to computer science problems.
2. Ability to design, implement and evaluate computer-based components, systems, processes or programs to meet desired needs and specifications.
3. Ability and skills to effectively use state-of-the-art techniques and computing tools for analysis, design, and implementation of computing systems.
4. Ability to function effectively as a member of a team assembled to undertake a common goal.
5. An understanding of professional, ethical, legal, security, and social issues and responsibilities.
6. Ability to communicate effectively to both technical and non-technical audiences.

7. The ability to successfully pursue professional development thru lifelong learning

In addition to Program Educational Objectives, for each course of undergraduate program, Course Objectives and expected outcomes from learner’s point of view are also included in the curriculum to support the philosophy of outcome based education. I believe strongly that small step taken in right direction will definitely help in providing quality education to the stakeholders.

Dr. Prachi Gharpure

Chairperson, Adhoc Board of Studies in Computer Engineering,

Course Code | Course/Subject Name | Credits
--- | --- | ---
CPC501 | Microprocessor | 5

**Objectives:**
1. To understand basic architecture of 16 bit and 32 bit microprocessors.
2. To understand interfacing of 16 bit microprocessor with memory and peripheral chips involving system design.
3. To understand techniques for faster execution of instructions and improve speed of operation and performance of microprocessors.
4. To understand RISC and CISC based microprocessors.
5. To understand concept of multi core processors.

**Outcomes:** Learner will be able to…
1. Write programs to run on 8086 microprocessor based systems.
2. Design system using memory chips and peripheral chips for 16 bit 8086 microprocessor.
3. Understand and devise techniques for faster execution of instructions, improve speed of operations and enhance performance of microprocessors.
4. Distinguish between RISC and CISC processors.
5. Understand multi core processor and its advantages.

5.1 Block Diagram, Superscalar Operation, Integer & Floating Point Pipeline Stages, Branch Prediction, Cache Management. | 08 |
Term Work:
The distribution of marks for term work shall be as follows:

- Laboratory work (experiments/practical & case studies):…………. (15) Marks.
- Assignments……………………………………………………….. (05) Marks.
- Attendance ………………………………………………………… (05) Marks

TOTAL: ………………………………………………………………… (25) Marks.

Practical/Experiments:
1. Total eight experiments / practical must be performed out of which five practical must be performed on assemblers for 8086 and three experiments must be performed on interfacing of 8086 with peripheral chips like 8255 PPI, 8253 PIT, 8259 PIC and 8237 DMAC.
2. In addition to eight experiments/practical, two case studies are mandatory, one case study on RISC processor and second case study on CISC processor.

Practical examination will be conducted based on the above syllabus.

Text Books:

Reference Books:
1. 8086/8088 family: Design Programming and Interfacing: John Uffenbeck , PHI.
5. The SPARC Architecture Manual
6. Intel Manuals
Course Code | Course/Subject Name | Credits
--- | --- | ---
CPC502 | Operating Systems | 5

Objectives:
1. To introduce students with basic concepts of Operating System, its functions and services.
2. To familiarize the students with various views and management policies adopted by O.S. as pertaining with processes, Deadlock, memory, File and I/O operations.
3. To brief the students about functionality of various OS like Unix, Linux and Windows XP as pertaining to resource management.
4. To provide the knowledge of basic concepts towards process synchronization and related issues.

Outcomes: Learner will be able to…
1. Appreciate the role of operating system as System software.
2. Compare the various algorithms and comment about performance of various algorithms used for management of memory, CPU scheduling, File handling and I/O operations.
3. Apply various concept related with Deadlock to solve problems related with Resources allocation, after checking system in Safe state or not.
4. To appreciate role of Process synchronization towards increasing throughput of system.
5. Describe the various Data Structures and algorithms used by Different Oss like Windows XP, Linux and Unix pertaining with Process, File, I/O management.
6. To control the behavior of OS by writing Shell scripts.

4. Memory Management

4.1 Memory management strategies: background, swapping, contiguous memory allocation, paging, structure of page tables, segmentation

4.2 Virtual memory management: Demand paging, copy-on write, page replacement, FIFO, Optimal, LRU, LRU Approximation, Counting Based, Allocation of frames, Thrashing

5. File Management

5.1 Files-System Structure, File System implementation, Directory implementation, Allocation Methods (contiguous allocation, linked list allocation, indexed allocations, Free space management).

5.2 Secondary storage: structures: Disks Scheduling Algorithm: FCFS, SSTF, SCAN, CSCAN, LOOK, Disk Management

6. Input Output Management

6.1 Overview, I/O Hardware, Application I/O Interface

7. Case Study of UNIX

7.1 History of UNIX, Overview of UNIX, UNIX File System, Data structures for process/memory management, Process states and State Transitions, Using the System (Booting and login), Process scheduling, Memory management, Shell programming

8. Case Study of Linux

8.1 History, Design Principles, Kernel Modules, Process management, Scheduling, Memory management, File Systems, Input and Output, Inter process communication, Network structure, Security

9. Case study: Windows 7

9.1 History, Design Principles, System components, environmental subsystems, File System, Networking, Programmer Interface

Term Work:

The distribution of marks for term work shall be as follows:

- Laboratory work (experiments+mini project): ………….. (15)
- Assignments: ………………………………………………….. (05)
- Attendance ………………………………………………. (05)

TOTAL: …………………………………………………… (25)

Practical/Experiments:

Laboratory work shall consist of minimum 08 experiments and mini project, 2 assignments based on above theory syllabus.

The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work.

Practical exam will be based on the above syllabus.
Text Books:

Reference Books:
3. Unix and Shell Programming by B. M. Harwani Oxford
5. Thomas Rebecca : Yates A user guide to the Unix system.

Syllabus for Practical:
Suggested topics for experiment but not limited to:
1. *Exploring basic commands for handling File system under Unix/Linux using shell scripts.
   ( creating groups, chown, chmod, directory name, tty, diff, umask )
2. *Pattern matching utilities like awk, grep, nroff, troff, sort etc.
3. *Exploring the boot process of Unix/Linux and implementing practical on it (for ex. MBR, passing different parameter to kernel, do different activity while booting and power-off).
4. Basic Process management algorithms ( Any from FCFS, SJF, SRTN, RR, multilevel Queue scheduling )
5. Process synchronization algorithms like producer consumer problem, dining philosopher problem
6. Implementing Various page replacement policies: FIFO, Optimal, LRU, LFU
7. Implementation of Disk scheduling algorithms like FCFS, SSTF, SCAN, CSCAN, LOOK.
8. Implementing Various file allocation methods: Index Allocation, Contiguous allocation.
9. Simulating Paging and Segmentation
10. Implementation of System calls like printing a file, display file using Unix/Linux internals.
11. Study booting process of Windows, Linux, and Unix.

* Marked experiments are mandatory

</table>

**List of Assignment:**
Assignments can be based on following topics
1. Feasibility analysis
2. Design patterns.

Term Work:
The distribution of marks for term work shall be as follows:
- Laboratory work: ........................................ (10) Marks.
- Mini Project presentation: ............................... (10) Marks.
- Attendance .............................................. (05) Marks

TOTAL: ......................................................... (25) Marks.

Oral exam will be based on the above syllabus and laboratory work.

Suggested Practical List:
1. Develop Requirement specification document of the selected / allotted project.
2. Develop DFD model (level-0, level-1 DFD and Data dictionary) of the selected / allotted project.
3. Develop UML Use case model for the selected / allotted project.
4. Develop sequence diagram selected / allotted project.
5. Develop Class diagram selected / allotted project.
6. Develop prototype of your project selected / allotted project.
7. Draw system architecture diagram selected / allotted project.

Text Books:
1. System Analysis & Design by Satzinger, Jackson and Burd, Cengage Learning, 2007
3. System Analysis and Design by Alan Dennis, Barbara H. Wixom, Roberta M. Roth, Wiley India 4th edition

Reference Books:
**Course Code**: CPC504  
**Course/Subject Name**: Computer Networks  
**Credits**: 4+1

**Objectives:**
1. To provide students with an overview of the concepts and fundamentals of data communication and computer networks
2. To familiarize with the basic taxonomy and terminology of computer networking area.
3. To experience the designing and managing of communication protocols while getting a good exposure to the TCP/IP protocol suite.

**Outcomes:**
*After completion of this course learner will be able to:*
1. Conceptualize all the OSI Layers
2. Use appropriate network tools to build network topologies
3. Install and configure an open source tool NS2
4. Test simple protocols in a laboratory scenario

**Term Work:**

Term work shall consist of minimum 12 experiments. Journal must include at least 2 assignments. The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work.

The distribution of marks for term work shall be as follows:

- Experiments: ........................................ (15) Marks.
- Assignments: ........................................... (05) Marks.
- Attendance ........................................... (05) Marks

**TOTAL:** .................................................. (25) Marks.

**Practical exam will be based on the above syllabus.**

**Suggested Practicals:**

1. Study of LAN Topology.
2. Study of various Network devices.
4. Installation & Configuration of NS2 in Linux environment.
5. Basic wired & wireless topology in NS2.
8. Write a program to implement find out class of a given IP address, subnet mask & first & last IP address of that block.
9. Write a program to build client-server model on different computers.
11. Datalink Layer: Error Detection and correction, Flow Control, Framing
12. Network Layer: IP Addressing, Routing

**Text Books:**

**Reference Books:**

5. An Engineering Approach To Computer Networking: Atm Networks, The Internet ... By Keshav
Objectives:
1. To inculcate in students professional and ethical attitude, effective communication skills, teamwork, skills, multidisciplinary approach and an ability to understand engineer’s social responsibilities.
2. To provide students with an academic environment where they will be aware of the excellence, leadership and lifelong learning needed for a successful professional career.
3. To inculcate professional ethics and codes of professional practice
4. To prepare students for successful careers that meets the global Industrial and Corporate requirement’ provide an environment for students to work on Multidisciplinary projects as part of different teams to enhance their team building capabilities like leadership, motivation, teamwork etc.

Outcomes: A learner will be able to …..
1. communicate effectively in both verbal and written form and demonstrate knowledge of professional and ethical responsibilities
2. Participate and succeed in Campus placements and competitive examinations like GATE, CET.
4. Have education necessary for understanding the impact of engineering solutions on Society and demonstrate awareness of contemporary issues.

| 01     | **Title:** Create HTML Forms. Use of various HTML Tag on Web Forms.  
Concept: Designing of effective web site, Introduction of different Web Technologies: HTML, and Different HTML Tag.  
Objective: objective of this module is to provide students an overview of the concepts Web Technologies, and HTML.  
Scope: Designing static client side web page using various HTML tags.  
Technology: HTML | 01 |
| 02     | **Title:** Use of CSS on HTML Form.  
Concept: Cascaded Style Sheets  
Objective: In this module student will learn, defining a CSS and unstaring its purpose different syntax and types of CSS.  
Scope: Creating web pages and use CSS to control the layout pages.  
Technology: HTML with Cascade Style Sheet. | 01 |
| 03     | **Title:** Use of Java Script functions on Web Forms and Use of Dynamic HTML Page.  
Concept: Scripting Languages, Dynamic web pages  
Objective: in this lab student will learn how to define client side scripting and understand its advantages and disadvantages. Embedding JavaScript code into HTML document using script tag, and will understand dynamic HTML.  
Scope: Create animation using JavaScript.  
Technology: HTML with JavaScript. | 02 |
| 04     | **Title:** Creation of Web page with the help of Quanta Plus /Aptana /Kompozer.  
Concept: Web development Environment  
Objective: This module students will learn how will introduce editors for development of web pages.  
Scope: Development of web pages using any web tool.  
Technology: Quanta Plus /Aptana /Kompozer | 03 |
**Term work Assessment:**
Term work will consist of small assignments testing all the technologies included in syllabus and a Mini project solving an appropriate problem using the above technology

The distribution of marks for term work shall be as follows:

- Assignments: .................................................. (10) Marks.
- Project Report Presentation........................................ (10) Marks.
- Attendance .............................................................(05) Marks

**TOTAL:** ............................................................... (25) Marks.

**End Semester Examination:**
Oral examination is to be conducted by pair of internal and external examiners based on the mini projects undertaken by student groups.

**Text Books:**

Objectives:
1. To help students appreciate the role and functioning of various system programs over application program
2. To initiate an understanding of compilers in general and brief about phases of compiler.
3. To provide a theoretical framework for optimizing the code.
4. To familiarize and encourage the students to use various software tools for Developing System programs.

Outcomes: Learner will be able to…
1. Identify different system software
2. Use Lex tool used for generating lexical analyser.
3. Write macros as and when required to increase readability and productivity
4. Design hand written lexical analyzer
5. Design new language structures with the help of grammars
6. Appreciate the role of Operating System functions such as memory management as pertaining to run time storage management
7. Appreciate role of Intermediate Code Generation in connection with language designing
8. Apply optimization principles on given code
9. Implement various parser types and use YACC.

### Term Work:

Journal should include at least 10 experiments (out of which at least 7 from suggested list below) and at least 2 assignments.

The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work.

The distribution of marks for term work shall be as follows:

- Laboratory work (experiments): .......................... (15) Marks.
- Assignment: .................................................. (05) Marks.
- Attendance .................................................... (05) Marks

**TOTAL:** ......................................................... (25) Marks.
Practical/Oral examination:

Practical examination will be conducted based on above syllabus

Theory Examination:

In question paper, weight age of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.

1. Question paper will comprise of total 6 questions, each of 20 Marks.
2. Only 4 questions need to be solved.
3. Question 1 will be compulsory and based on maximum part of the syllabus.
4. Remaining questions will be mixed in nature (for example suppose Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)

Text Books:

2. A. V. Aho, R. Shethi and J.D. Ulman; Compilers - Principles, Techniques and Tools, Pearson Education

Reference Books:

1. lex & yacc, 2nd Edition by John R. Levine, Tony Mason & Doug Brown O’Reilly
Syllabus for LAB

Experiments can be conducted based on the suggested topics below:

**However list is not limited to mentioned topics.**

**Use of Open source tools is suggested.**

1. Lexical analyzer tool : flex
3. Find first() , follow() set of given grammar
4. removing left recursion direct as well as indirect given the set of production rule
5. Assemblers : 2 pass Assembler .
7. Syntax Analysis : ( any 1 of LL(1) , LR(0) , LR(1) , LALR(1) , operator precedence parser.
8. Create your library in Linux environment and using it.
11. Study ld command in Unix/Linux.
Objectives:
The main objective is to introduce to the students about the product that is to be engineered and the process that provides a framework for the engineering technology.

1. To provide knowledge of software engineering discipline.
2. To analyze risk in software design and quality.
3. To introduce the concept of advance software methodology.

Outcomes: Learner will be able to…

1. Students will demonstrate basic knowledge in software engineering.
2. Students will be able to plan, design, develop and validate the software project.
3. Students will be apply advance software methodology to create high quality WebApps.
4. Students will have an understanding of impact of sound engineering principles.

Term Work:

Assign a case study for group of 2/3 students and each group to perform the following experiments on their case-study:

- Creation of centralized database (Global Schema).
- Perform Fragmentation (PHF, DHF, VF, and HF) and allocation in DDBS design.
- Implementation of concurrency control.
- Implementations of two phase or three phases commit protocol.
- Implementations of three deadlock detection.
- Simulation of distributed query processor.
- Implementation of query optimization.
- Implementation any two experiment on XML

The distribution of marks for term work shall be as follows:

- Laboratory work (experiments/assignments): ............ (10) Marks.
- Course project:................................................. (10) Marks.
- Attendance .................................................. (05) Marks
- TOTAL: ................................................................ (25) Marks.

Practical/Oral examination:

An oral exam will be held based on the above syllabus.

Text Books:

Reference Books:

Objectives:
1. To introduce the basic concepts and principles in mobile computing. This includes the major techniques involved, and networks & systems issues for the design and implementation of mobile computing systems and applications.
2. To explore both theoretical and practical issues of mobile computing.
3. To provide an opportunity for students to understand the key components and technologies involved and to gain hands-on experiences in building mobile applications.

Outcomes: Learner will be able to…
1. Understand GSM and CDMA Cellular architecture.
2. Setup and configure wireless access points.
3. Use Network Simulator tool to simulate mobile network.
4. Implement small android based applications.

**Term Work:**

Term work shall consist of minimum assignments and course project. The distribution of marks for term work shall be as follows:

- Laboratory work (experiments/assignments): .............. (20) Marks.
- Attendance .................................................. (05) Marks
- **TOTAL:** ....................................................... (25) Marks.

**Practical/Oral examination:**

Practical exam will be held based on the above syllabus.

**Suggested Laboratory Exercises of Mobile Computing:**

1. Setup & Configuration of Wireless Access Point (AP)
2. Implementation of WLAN: Ad Hoc & Infrastructure Mode
3. Implementation of Bluetooth Protocol and Applications
4. GSM modem study (Android based mobile) and SMS client-server application
5. Implementation of Mobile Network using Network Simulator (NS2)
6. Mobile Internet and WML
7. J2ME Program for Mobile Node Discovery
10. Wireless Network Security: kismet and Netstumbler

### 04 Duality and Post-Optimal Analysis

| 4.1 Definition of the Dual Problem |
| 4.2 Primal-Dual Relationships |
| 4.2.1 Review of Simplex Matrix Operations |
| 4.2.2 Simplex Tableau Layout |
| 4.2.3 Optimal Dual Solution |
| 4.2.4 Simplex Tableau Computations |
| 4.3 Economic Interpretation of Duality |
| 4.3.1 Economic Interpretation of Dual Variables |
| 4.3.2 Economic Interpretation of Dual Constraints |
| 4.4 Additional Simplex Algorithms |
| 4.4.1 Dual Simplex Algorithm |
| 4.4.2 Generalized Simplex Algorithm |

### 05 Transportation Model and Its Variants

| 5.1 Definition of the Transportation Model |
| 5.2 Nontraditional Transportation Models |
| 5.3 The Transportation Algorithm |
| 5.3.1 Determination of the Starting Solution |
| 5.3.2 Iterative Computations of the Transportation Algorithm |
| 5.3.3 Simplex Method Explanation of the Method of Multipliers |
| 5.4 The Assignment Model |
5.4.1 The Hungarian Method
5.4.2 Simplex Explanation of the Hungarian Method

06 Decision Analysis
   6.1 Decision Making under Certainty – Analytic Hierarchy Process (AHP)
   6.2 Decision Making under Risk
      6.2.1 Decision Tree-Based Expected Value Criterion
      6.2.2 Variants of the Expected Value Criterion
   6.3 Decision under Uncertainty

07 Stimulation Modeling
   7.1 Monte Carlo Simulation
   7.2 Types of Simulation
   7.3 Elements of Discrete Event Simulation
      7.3.1 Generic Definition of Events
      7.3.2 Sampling from Probability Distributions

08 Nonlinear Programming Algorithms
   8.1 Unconstrained Algorithms
   8.1.1 Direct Search Method
   8.1.2 Gradient Method
   8.2 Constrained Algorithms
   8.2.1 Separable Programming
   8.2.2 Quadratic Programming

09 Introduction to spreadsheet model

List of Assignment:

Atleast 15 assignments based on the above syllabus; Assignments to also include programs wherever applicable.

Term Work:

The distribution of marks for term work shall be as follows:

- Laboratory work (assignments): ........................ (25) Marks.
- Case Study Presentations (to be done during semester):........................................ (15) Marks.
- Attendance ............................................................ (10) Marks

TOTAL: ........................................................................ (50) Marks.

The final certification and acceptance of term work ensures the satisfactory performance of work assigned and minimum passing in the term work.

Outcomes: Learner will be able to...
1. Learner will be able to define characteristics of a project.
2. Learner will be able to appreciate project management principles, risk in environment and the management challenges for effective project management.
3. Learner will be able to apply the project management principles across all phases of a project.
4. Learner will be able to demonstrate use of tools and techniques for the management of a project plan, monitor and controlling a project schedule and budget, tracking project progress.

**Term Work:**

Term work shall consist of at least 10 assignments covering all topics and course project by using appropriate tool. The distribution of marks for term work shall be as follows:

2. Case study presentations (**to be done during semester**:...... (15)
3. Attendance:............................................................ (10)

**TOTAL:** ........................................................... (50)Marks.

The final certification and acceptance of TW ensures the satisfactory Performance of laboratory Work and Minimum Passing in the term work.
**Suggested Assignment List**

In practical, a group of maximum three students should be formed. Each group is supposed to complete all lab experiments on the case study given by the subject teacher. In lab experiments students can used the tools like MsWord to prepare document whereas MsProject to preparing WBS, N/w diagram, PERT, CPM, Variance analysis etc.

1. Project and System’s Management
2. Feasibility study document
3. Project Proposal
4. Project Planning
5. Activity Planning
6. Analyzing the project network diagram
7. Cost estimation and budgeting
8. Risk management
9. Performance analysis of project
10. Project evaluation and closure

**Text Book:**

**Reference Books:**

Objectives:
1. To introduce German language in a holistic manner. The texts and exercises are aimed at developing the students’ skills of reading, writing, listening and speaking. The course is divided into units with a thematic and grammatical progression. Scenarios from everyday life and formulated in a manner suitable and especially interesting for beginners. However since most of the students would want to do this course for professional advancement this course scenarios from the professional life are introduced in simple but engaging manner.

Outcomes: Learner will be able to…
1. read and understand simple German / French text
2. Describe basic family structure , culture and work culture
3. Draft e-mails and create simple presentations

| 15 | Design a TCP concurrent Server to echo given set of sentences using Poll functions. |
| 16 | Design UDP Client and Server application to reverse the given input sentence. |
| 17 | Design UDP Client Server to transfer a file. |
| 18 | Design using Poll Client Server application to multiplex TCP and UDP requests for converting a given text into upper case. |
| 19 | Design a RPC application to add and subtract a given pair of integers. |
| 20 | Program to determine the host ByteOrder |
| 21 | Program to set and get socket options |

**Format of Laboratory Course:**
The format for the Laboratory Course is  
1. At least 8 small experiments based on above syllabus  
2. One group Miniproject  
A group of 3 students; 4 Batches per class.  
The scope of the miniproject should be such that it completes in 15 hours of actual working.

**Termwork Assessment:**
Laboratory Experiment:  10  
Mini Project presentation:  10  
Attendance:  05

**End Semester Examination:**
Oral examination is to be conducted by pair of internal and external examiners

**Objectives:**
1. To learn the fundamental concepts of Digital Signal Processing.
2. To explore the properties of DFT in mathematical problem solving.
3. To illustrate FFT calculations mathematically and develop FFT based DSP algorithms.
4. To introduce DSP processor for real time signal processing application

**Outcomes:** Learner will be able to…
1. To understand the concept of DT Signal and perform signal manipulation
2. To perform analysis of DT system in time domain
3. To develop FFT flow-graph and Fast DSP Algorithms.
4. To design DSP system for Real Time Signal Processing.

| 06 | **DSP Processors and Application of DSP**  
| 6.1 Need for Special architecture of DSP processor, Difference between DSP processor & microprocessor, A general DSP processor TMS320C54XX series, Case study of Real Time DSP applications to Speech Signal Processing and Biomedical Signal Processing. |

**List of Experiments:**

Implementation of programs must be either in C or C++ only. Application can be developed using open source simulation software such as Scilab. A List of compulsory eight experiments is given below. Additional experiments within the scope of the syllabus can be added.

1. **Sampling and Reconstruction**
   **Aim:**
   To study sampling and reconstruction of signal

   **Objective:**
   Develop a program to sample a continuous time signal and convert it to Discrete Time Signal.

   **Problem Definition:**
   1. Sample the input signal and display first 50 samples. Calculate data rate and bit rate.
   2. Reconstruct the original signal and display the original and reconstructed signals.
   3. Vary the sampling frequency and observe the change in the quality of reconstructed signal.

2. **To perform Discrete Correlation**
   **Aim:**
   To study mathematical operation Correlation and measure degree of similarity between two signals

   **Objective:**
   1. Write a function to find correlation operation.
   2. Calculate correlation of a DT signals and verify the results using mathematical formulation.
   3. Measure the degree of similarity using Carl’s Correlation Coefficient formula in time domain.

   **Input Specifications:**
1. Length of first Signal L and signal values.
2. Length of second Signal M and signal values.

**Problem Definition:**
1. Find auto correlation of input signal. What is the significance of value of output signal value at n=0?
2. Find auto correlation of delayed input signal.
3. Find cross correlation of input signal and delayed input signal.
4. Find cross correlation of input signal and scaled delayed input signal.
5. Compare the resultant signals. Give your conclusion.
6. Take two input finite length DT signals and develop a function to find Carl’s Correlation Coefficient value. Determine the degree of similarity of two signals from the calculated Carl’s Correlation Coefficient value.

---

3. **To perform Discrete Convolution**

**Aim:**
The aim of this experiment is to study mathematical operation such as Linear convolution, Circular convolution, Linear convolution using circular convolution.

**Objective:**
1. Develop a function to find Linear Convolution and Circular Convolution
2. Calculate Linear Convolution, Circular Convolution, Linear Convolution using Circular Convolution and verify the results using mathematical formulation.
3. Conclude on aliasing effect in Circular convolution

**Input Specifications:**
1. Length of first Signal L and signal values.
2. Length of second Signal M and signal values.

**Problem Definition:**
1. Find Linear Convolution and Circular Convolution of L point sequence x[n] and M point sequence h[n].
2. Find Linear Convolution of L point sequence x[n] and M point sequence h[n] using Circular convolution.
3. Give your conclusion about No of values in linearly convolved signal, and Aliasing effect in Circular Convolution.
4. **To perform Discrete Fourier Transform**

**Aim:**
The aim of this experiment is to study magnitude spectrum of the DT signal.

**Objective:**
1. Develop a function to perform DFT of N point signal
2. Calculate DFT of a DT signal and Plot spectrum of the signal.
3. Conclude the effect of zero padding on magnitude spectrum.
4. Calculate the number of real multiplications and real additions required to find DFT.

**Input Specifications:**
1. Length of Signal N
2. Signal values

**Problem Definition:**
1. Take any four-point sequence x[n].
   - Find DFT X[k].
   - Compute number of real multiplications and real additions required to find X[k].
   - Plot Magnitude Spectrum of the signal.

2. Append the input sequence by four zeros. Find DFT and plot magnitude spectrum. Repeat the same by appending the sequence by eight zeros. Observe and compare the magnitude spectrum. Give your conclusion.

5. **To perform Fast Fourier Transform**

**Aim:**
To implement computationally fast algorithms.

**Objective:**
1. Develop a program to perform FFT of N point signal.
2. Calculate FFT of a given DT signal and verify the results using mathematical formulation.
3. Illustrate the computational efficiency of FFT.

**Input Specifications:**
- Length of Signal N
- Signal values

**Problem Definition:**
Take any eight-point sequence x[n].
6. Filtering of long Data Sequence
Aim:
To perform filtering of Long Data Sequence using Overlap Add Method and Overlap Save Method.

Objective:
Develop a function to implement Fast Overlap Add and Fast Overlap Save Algorithm using FFT.

Input Specifications:
1. Length of long data sequence and signal values.
2. Length of impulse response M and coefficient values of h[n].

Problem Definition:
Find the output of a Discrete Time system using Fast Overlap Add Method OR Fast Overlap Save Method.

7. Real Time Signal Processing
Aim:
To perform real time signal processing using TMS320 Processor.

Objective:
Study real time signal processing.

Input Specifications:
1. Real Time Speech Signal

Problem Definition:
1) Capture the real time audio signal.
2) Filter it by convolving input signal with the impulse response of FIR filter using Fast Overlap Add filtering Algorithm OR Fast Overlap Save Filtering Algorithm.
3) Observe the quality of output signal.

8. Application of Digital Signal Processing
Aim:
To implement any Signal Processing operation on one dimensional signal.

**Objective:**
To develop application of signal processing.

**Input Specifications:**
One dimensional signal.

**Rules:**
1. Number of students in one Group: min - 2 max -3
2. Decide one DSP application of your choice. Collect the information related to the application from the published granted patents. Download the related published papers from the standard refereed journals and conferences.
3. Develop a block diagram of the proposed system and flowchart of proposed system algorithm, implement it using Scilab/C, C++ language and obtain the appropriate results.
4. Prepare the three to four pages report on the mini project in IEEE paper format. Report should include Abstract, Introduction, Related Theory, Proposed System Design/Algorithm, Experimentation & Result Analysis, Conclusion, and References.

**Term Work:**
- Term work shall consist of minimum 08 assignments and course project.
- Journal must include at least 1 assignment on each module and two quiz.
- The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work.

The distribution of marks for term work shall be as follows:
- Laboratory work (experiments): ......................... (15) Marks.
- Assignment:................................................. (05) Marks.
- Attendance (Theory+ Practical)......................... (05) Marks
**TOTAL: ............................................................ (25) Marks.**

**Text Books:**

Reference Books :

**Course Code**: CPC702  
**Course/Subject Name**: Cryptography and System Security  
**Credits**: 5

**Objectives:**
1. To provide students with contemporary knowledge in Cryptography and Security.
2. To understand how crypto can be used as an effective tools in providing assurance concerning privacy and integrity of information.
3. To provide skills to design security protocols for recognize security problems.

**Outcomes:** Learner will be able to…
1. Understand the principles and practices of cryptographic techniques.
2. Understand a variety of generic security threats and vulnerabilities, and identify & analyze particular security problems for given application.
3. Appreciate the application of security techniques and technologies in solving real-life security problems in practical systems.
4. Apply appropriate security techniques to solve security problem
5. Design security protocols and methods to solve the specific security problems.
6. Familiar with current research issues and directions of security.

---

**Term Work:**

Term work should consist of at least 10 experiments, 2 assignments based on above theory syllabus.

The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work. The distribution of marks for term work shall be as follows:

- Laboratory work (experiments): ....................... (15) Marks.
- Assignment:.................................................. (05) Marks.
- Attendance (Theory+ Practical)......................... (05) Marks

**TOTAL:** ............................................................. (25) Marks.

**Practical/Oral examination:**

Practical Exam will be based on above syllabus.

### Syllabus for Practical

Suggested topics for experiment but not limited to:

1. RSA and MD5 algorithms.
2. Packet Analyzer.
3. IPSec
4. Spoofing
5. PGP(Pretty Good Privacy)
6. Port Scanning
7. Vulnerability scanner
8. Buffer Overflow
9. Intrusion Detection System
10. Password cracking
11. Firewall
12. SSL

**Theory Examination:**

1. Question paper will comprise of total 6 questions, each of 20 Marks.
2. Only 4 questions need to be solved.
3. Question 1 will be compulsory and based on maximum part of the syllabus.
4. Remaining questions will be mixed in nature (for example suppose Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)

   **In question paper, weightage of each module will be proportional to number of respective lecture hours as mentioned in the syllabus.**

- Attendance ......................................................... (05) Marks

**TOTAL:** ................................................................. (25) Marks.

There will be at least two assignments covering the above syllabus.

**Practical/Oral examination:**

Practical examination based on the above syllabus will be conducted.

**List of AI Practical / Experiments**

*All the programs should be implemented in C/C++/Java/Prolog under Windows or Linux environment. Experiments can also be conducted using available open source tools.*
1. One case study on NLP/Expert system based papers published in IEEE/ACM/Springer or any prominent journal.

2. Program on uninformed and informed search methods.

3. Program on Local Search Algorithm.

4. Program on Optimization problem.

5. Program on adversarial search.

6. Program on Wumpus world.

7. Program on unification.

8. Program on Decision Tree.

Any other practical covering the syllabus topics and subtopics can be conducted.

**Reference Books (Practicals):**

**Text Books:**

**Reference Books:**

2. Elaine Rich and Kevin Knight “Artificial Intelligence” Third Edition
**Course Code**: CPE7021  
**Course/Subject Name**: Advanced Algorithms  
**Credits**: 5

**Objectives:**
1. To teach fundamentals of analysis of algorithm at depth  
2. To provide in depth study of advanced data structures and its uses  
3. To teach analysis of problems from different domains

**Outcomes:** Learner will be able to…  
1. Identify and use suitable data structures for given problem from different domains  
2. Appreciate the role of Graph algorithms in solving variety of problems  
3. Appreciate the role of Optimization by using linear programming  
4. Analyze the various algorithms from different domains

**Term Work:**

Term work should consist of at least 6 experiments, 2 assignments based on above theory syllabus.

The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work.

The distribution of marks for term work shall be as follows:

- Laboratory work (experiments): ………………… (15) Marks.
- Assignment:…………………………………….. (05) Marks.
- Attendance (Theory+ Practical)…………………… (05) Marks

**TOTAL:** …………………………………………………… (25) Marks.

**Practical/Oral examination:**

Oral examination based on above syllabus will be conducted

**Syllabus for Practical**

Suggested topics for experiment but not limited to:

1. Red – black trees and its various operations
2. Binomial Heaps and its various operations
3. Dynamic programing: matrix chain multiplication , cutting rod example
4. Bellman ford , Johnson’s algorithm for sparse graphs
5. Ford Fulkerson algorithm , push relabel to front methods
6. Finding closest pair of points, Determining the convex hull
7. Implementation of Simplex algorithm

**Text Books:**

2. Ellis Horowitz , Sartaj Sahni , S. Rajsekaran. “Fundamentals of computer algorithms” University press
Objectives:
1. To learn the fundamental concepts of Digital Image Processing and Video Processing.
2. To understand basic image enhancement and segmentation techniques.
3. To illustrate Image Transform calculations mathematically and develop fast transform algorithm.
4. To learn Image Compression and Decompression Techniques.

Outcomes: Learner will be able to…
2. Explain image enhancement and Segmentation technique.
3. Develop fast image transform flowgraph.
4. Solve Image compression and decompression techniques.

3.1 Detection of Discontinuities, Edge Linking using Hough Transform, Thresholding, Region based Segmentation, Split and Merge Technique, Image Representation and Description, Chain Code, Polygonal Representation, Shape Number, Moments. | 09 |
| 04     | **Image Transform**
4.1 Introduction to Unitary Transform, Discrete Fourier Transform(DFT), Properties of DFT, Fast Fourier Transform(FFT), Discrete Hadamard Transform(DHT), Fast Hadamard Transform(FHT), Discrete Cosine Transform(DCT), Discrete Wavelet Transform(DWT), | 09 |
| 05     | **Image Compression**
5.1 Introduction, Redundancy, Fidelity Criteria,
5.2 Lossless Compression Techniques : Run Length Coding, Arithmetic Coding, Huffman Coding, Differential PCM, | 09 |
5.3 Lossy Compression Techniques: Improved Gray Scale Quantization, Vector Quantization, JPEG, MPEG-1.

06 Binary Image Processing
6.1 Binary Morphological Operators, Hit-or-Miss Transformation, Boundary Extraction, Region Filling, Thinning and Thickening, Connected Component Labeling, Iterative Algorithm and Classical Algorithm

Term Work:
Term work should consist of at least 08 experiments. Journal must include at least 1 assignment on each module and two quiz. The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work.

The distribution of marks for term work shall be as follows:
- Laboratory work (experiments): ......................... (15) Marks.
- Assignment: .................................................. (05) Marks.
- Attendance (Theory+ Practical).......................... (05) Marks

TOTAL: ............................................................... (25) Marks.

Practical/Oral examination:
Oral exam will be based on the above syllabus

Practicals
Implementation of programs must be either in C or C++ only. A List of experiments is given below. Input can be Monochrome OR Colour Image. Additional experiments within the scope of the syllabus can be added.

1. Image Enhancement  [ Any two techniques ]
   (1) using Zero Memory Point Operations.
   (2) using Histogram Processing Technique
   (3) using Spatial Filtering  [ Smoothing Filters/ Sharpening Filters]
   (4) using Homomorphic Filtering

2. Image Segmentation  [ Any two techniques ]
   (1) Horizontal and Vertical Line Detection
   (2) Edge Detection
   (3) Split and Merge Technique
   (4) Edge Linking using Hough Transform
3. Image Compression and De-compression [ Any two techniques ]
   (1) Arithmetic Coding and Decoding
   (2) Huffman Coding and Decoding
   (3) IGS Quantization/ Vector Quantization based Compression and De-compression
   (4) Transform based Image Compression and De-compression [FFT/ FHT/DCT/ DWT]

4. Binary Image Processing [ Any two techniques ]
   (1) Opening followed by Closing
   (2) Hit or Miss Transform
   (3) Thinning/Thickening/ Region Filling / Boundary Extraction
   (4) Connected Component Algorithm

Outcomes:
Software architecture is foundational to the development of large, practical software-intensive applications.
After successful completion of this course learner will be able to:
  • Visualize the architectural concepts in development of large, practical software-intensive applications.
  • Rather than focusing on one method, notation, tool, or process, this new course widely surveys software architecture techniques, enabling us to choose the right tool for the job at hand.

#### 5.5 Type of Analysis.

#### 5.6 Analysis Techniques.

#### Term Work:

The distribution of marks for term work shall be as follows:

- Laboratory work (experiments): ................................................. (20) Marks.
- Attendance: ................................................................. (05) Marks.

**TOTAL:** ................................................................. (25) Marks.

**Practical/Oral examination:**

An Oral examination is to be conducted based on the above syllabus.
**Topics For Experiment:**

1. Modeling using xADL
2. Analysis - Case study
3. Visualization using xADL 2.0
4. Integrate software components using a middleware
5. Use middleware to implement connectors
6. Wrapper to connect two applications with different architectures
7. Creating web service
8. Architecture for any specific domain

**Books:**

**Text Books:**

**References:**

1. “Pattern Oriented Software Architecture” by Frank Buchnan et al, Wiley India.
CPE7025 | Soft Computing |
---|---|---

**Objectives:**
1. To Conceptualize the working of human brain using ANN.
2. To become familiar with neural networks that can learn from available examples and generalize to form appropriate rules for inference systems.
3. To introduce the ideas of fuzzy sets, fuzzy logic and use of heuristics based on human experience.
4. To provide the mathematical background for carrying out the optimization and familiarizing genetic algorithm for seeking global optimum in self-learning situation.

**Outcomes:** Learner will be able to…
1. Ability to analyze and appreciate the applications which can use fuzzy logic.
2. Ability to design inference systems.
3. Ability to understand the difference between learning and programming and explore practical applications of Neural Networks (NN).
4. Ability to appreciate the importance of optimizations and its use in computer engineering fields and other domains.
5. Students would understand the efficiency of a hybrid system and how Neural Network and fuzzy logic can be hybridized to form a Neuro-fuzzy network and its various applications.

03 Fuzzy Set Theory

04 Hybrid system
4.1 Introduction to Hybrid Systems, Adaptive Neuro Fuzzy Inference System (ANFIS).

05 Introduction to Optimization Techniques
5.1 Derivative based optimization - Steepest Descent, Newton method.
5.2 Derivative free optimization - Introduction to Evolutionary Concepts.

06 Genetic Algorithms and its applications:
6.1 Inheritance Operators, Cross over types, inversion and Deletion, Mutation Operator, Bit-wise Operators, Convergence of GA, Applications of GA.

Term Work:
The distribution of marks for term work shall be as follows:
- Laboratory work (experiments/case studies): ............ (15) Marks.
- Assignments: ................................................. (05) Marks.
- Attendance .................................................... (05) Marks
TOTAL: ................................................................. (25) Marks.

Practical/Oral examination:
Oral examination will be based on the above syllabus.

PRACTICALS:
All the programs should be implemented in C/C++/Java/MATLAB under Windows or Linux environment. Experiments can also be conducted using available open source tools like OCTAVE and SCILAB

LIST OF SC PRACTICAL / EXPERIMENTS

1. One case study on Fuzzy/Neural/GA based papers published in IEEE/ACM/Springer or any prominent journal.

2. To implement Fuzzy Sets.
3. To implement Fuzzy Relations.

4. To implement Fuzzy Controllers.

5. To implement Basic Neural Network learning rules.

6. To implement any Supervised Learning algorithm.

7. To implement any Unsupervised Learning algorithm.

8. To implement a simple application using Genetic Algorithm.

Any other practical covering the syllabus topics and subtopics can be conducted.

**Text Books:**

4. Enterprise wide resource planning: Theory & practice: by Rahul Altekar, PHI.

**Reference Books:**

1. ERP to E² ERP: A Case study approach, by Sandeep Desai, Abhishek Srivastava, PHI.
Course Objectives:

This course presents an introduction to discrete event simulation systems. Emphasis of the course will be on modeling and the use of simulation languages/software to solve real world problems in the manufacturing as well as services sectors. The course discusses the modeling techniques of entities, queues, resources and entity transfers in discrete event environment. The course will teach the students the necessary skills to formulate and build valid models, implement the model, perform simulation analysis of the system and analyze results properly. The “theory” of simulation involves probability and statistics, thus a good background in probability and statistics is a required prerequisite.

Course Outcomes:

1. Apply simulation concepts to achieve in business, science, engineering, industry and services goals
2. Demonstrate formulation and modeling skills.
3. Perform a simulation using spreadsheets as well as simulation language/package
4. Generate pseudorandom numbers using the Linear Congruential Method
5. Evaluate the quality of a pseudorandom number generator using statistical tests
6. Analyze and fit the collected data to different distributions

References:

5. Principles of Modeling and Simulation; Banks C M, Sokolowski J A; Wiley
6. System Simulation; Geoffrey Gordon; EEE
7. System Simulation with Digital Computer; Narsing Deo, PHI

Term work:

Laboratory work: 10 marks

Mini Simulation Project presentation: 10 marks

Attendance: 5 marks

Suggested Practical List (If Any):

Perform simulation exercises given in the text book (third edition) using spreadsheets and/or simulation language/package

5. Queue- single server, multi-server, classic case- dump truck
6. Inventory – Lead time=0, lead time fixed, lead time probabilistic
7. Reliability problem
8. Tutorials on statistical models
9. Random number generate and test
10. Goodness of fit test
11. Output analysis – Point estimate and Confidence Interval
Simulation: Real World Examples – can be in the field of business, transportation, medical, computing, manufacturing and material handling- Presentation to be taken.

**Practical/Oral examination:**

Oral examination will be based on the above syllabus.
Outcomes: After completion of this Laboratory course learner will be able to

1. Use network-based tools for network analysis
2. Use techniques for Network scanning
3. Identify network vulnerability
4. Use tools to simulate intrusion detection system
5. To understand and install a firewall

5

#### Objectives:
1. To study the methodology of engineering legacy databases for data warehousing and data mining to derive business rules for decision support systems.
2. To analyze the data, identify the problems, and choose the relevant models and algorithms to apply.

#### Outcomes: Learner will be able to…
1. Enable students to understand and implement classical algorithms in data mining and data warehousing; students will be able to assess the strengths and weaknesses of the algorithms, identify the application area of algorithms, and apply them.
2. Students would learn data mining techniques as well as methods in integrating and interpreting the data sets and improving effectiveness, efficiency and quality for data analysis.

</tr>
</tbody>
</table>
**Term Work:**

Term work should consist of at least of the following:

1. One case study given to a group of 3 /4 students of a data mart/ data warehouse.
   a. Write Detail Statement Problem and creation of dimensional modeling (creation star and snowflake schema)
   b. Implementation of all dimension table and fact table
   c. Implementation of OLAP operations.

2. Implementation of classifier like Decision tree, Naïve Bayes, Random Forest using any languages like Java

3. Use WEKA to implement classifier like Decision tree, Naïve Bayes, Random Forest

4. Implementation of clustering algorithm like K-means, K- Medoids, Agglomerative, Divisive using languages any like Java, C# , etc.

5. Use WEKA to implement the following Clustering Algorithms – K-means, Agglomerative, Divisive.

6. Implementation Association Mining like Apriori, FPM using languages like Java, C#, etc.

7. Use WEKA to implement Association Mining like Apriori, FPM.

8. Use R tool to implement Clustering/Association Rule/ Classification Algorithms.

9. Detailed study of any one BI tool like Oracle BI, SPSS, Clementine, and XLMiner etc. (paper Assignment)

**Internal Assessment:**

Internal Assessment consists of two tests. Test 1, an Institution level central test, is for 20 marks and is to be based on a minimum of 40% of the syllabus. Test 2 is also for 20 marks and is to be based on the remaining syllabus. Test 2 may be either a class test or assignment on live problems or course project

**Practical/Oral examination:**

An oral exam will be held based on the above syllabus

**Text Books:**

1) Han, Kamber, "Data Mining Concepts and Techniques", Morgan Kaufmann 3rd Edition
2) Paulraj Ponniah, “Data Warehousing: Fundamentals for IT Professionals”, Wiley India
3) Reema Theraja “Data warehousing”, Oxford University Press.
4) M.H. Dunham, “Data Mining Introductory and Advanced Topics”, Pearson Education

Reference Books:

2) Alex Berson , S. J. Smith, “Data Warehousing, Data Mining & OLAP” , McGraw Hill.
4) Daniel Larose, “Data Mining Methods and Models”, Wiley India.
**Course Code**: CPC802  
**Course/Subject Name**: Human Machine Interaction  
**Credits**: 5

**Objectives:**
1. To stress the importance of a good interface design.
2. To understand the importance of human psychology in designing good interfaces.
3. To motivate students to apply HMI in their day-to-day activities.
4. To bring out the creativity in each student – build innovative applications that are user friendly.
5. To encourage students to indulge into research in Machine Interface Design.

**Outcomes:** Learner will be able to…
1. To design user centric interfaces.
2. To design innovative and user friendly interfaces.
3. To apply HMI in their day-to-day activities.
4. To criticise existing interface designs, and improve them.
5. To Design application for social and technical task.

**Term Work:**

The distribution of marks for term work shall be as follows:

- Laboratory work (experiments/case studies): .............. (15) Marks.
- Assignment: .................................................. (05) Marks.
- Attendance ................................................... (05) Marks

**TOTAL:** ........................................................... (25) Marks.

**Internal Assessment:**

Internal Assessment consists of two tests. Test 1, an Institution level central test, is for 20 marks and is to be based on a minimum of 40% of the syllabus. Test 2 is also for 20 marks and is to be based on the remaining syllabus. Test 2 may be either a class test or assignment on live problems or course project.

**Practical/Oral examination:**

Oral examination will be based on the above syllabus.

**Laboratory:**

Students are free to choose any tool that they feel appropriate for a given experiment. Each experiment will involve research about a certain category of people, and then developing an appropriate interface.

Students are expected to perform at least eight experiments from the given list.

**LIST OF HMI PRACTICAL / EXPERIMENTS**

1. Know your client –
   a. Children (4-5 years of age): An application to teach math.
   b. Teenagers: Design a digital diary for young teens to help them overcome various social pressures they deal with during their teen years. The diary should also be like a self help tool which would help them deal with incidents like bullying, peer pressure, etc.. This is an open project and you can think in any direction to make the children sail through their teen years while trying to discover life around them.
   c. Older generation: Folks from the older generation has been very wary of using their credit card on the Internet. They have various concerns when it comes to paying their bills. Also because of their old age, it will be beneficial for them to use the internet and pay their phone, electricity, gas, etc. bills
   d. Rural people: ATVM for train ticketing in rural area
2. Understand the trouble of interacting with machines - Redesign interfaces of home appliances like microwave oven, land-line phone, fully automatic washing machine.

3. Learn HCI design principles – heuristic evaluation: Identify 5 different websites catering to one specific goal (eg. Goal – on-line shopping and 5 different websites – ebay, amazon, flipkart, zovi, myntra) and perform a competitive analysis on them to understand how each one caters to the goal, the interactions and flow of the payment system and prepare a report on the same..

4. Learn the importance of menus and navigation – website redesign: News websites like CNN are always cluttered with information. It takes the user a few minutes to find his way through and maybe more minutes to look for some specific information. Redesign the news websites to make it look less cluttered, provide relevant information (a person sitting in Russia should not get US news as top news), intelligently dig information that he might be interested in based on his searches on the web.

5. Learn the importance of connecting humans – service design : How often have you found yourself waiting at the airport for a flight that is delayed or you’ve missed it and the next one is 4 hours from now, or waiting for a connecting flight? Design an experience for passengers to deal with the long waiting hours.

6. Learn the use of statistical graphics – expense tracker: Matt is a young engineer who just finished his summer internship at a leading Software Company in the United States. He has never been independent in handling his own finances and after this internship his father has asked him to start managing his money on his own. He is looking for a tool/app/software that would help him budget his finances, create goals and track them, categorize and track his credit card spending and also get insights on the various types of categories he’s spending on. Design a tool/app/software that would help Matt manage his personal finances given the above requirement.

7. Learn the importance of graphics – way finding: Design a map for someone who is new to the city/town/village and is trying to understand how to commute from one place to another (inspired by New York Subway Maps, London Subway Maps)

8. Icon designing: Choose a unique domain, design a few icons and show how it can be accommodated on an interface.

9. Understand the need of colors and animation – web site for an artist: A celebrity in some form of art like music, dance, painting, martial arts, etc (not actors). This site will be used to display his works and should portray his character.

10. Understand the various input methods available for interaction – concept generation: Study the various technologies for typing – standard keyboards QWERTY, T9 (predictive text), multi-touch (SYWPE, etc.), gestures and brainstorm on the various ways in which you could improve one of the existing technologies. You could choose any of the different input types.
11. Any other new relevant topics covering the above syllabus.

**Objectives:**
1. To provide students with contemporary knowledge in parallel and distributed systems
2. To equip students with skills to analyze and design parallel and distributed applications.
3. To provide master skills to measure the performance of parallel and distributed algorithms

**Outcomes:** Learner will be able to…
1. Apply the principles and concept in analyzing and designing the parallel and distributed system
2. Reason about ways to parallelize problems.
3. Gain an appreciation on the challenges and opportunities faced by parallel and distributed systems.
4. Understand the middleware technologies that support distributed applications such as RPC, RMI and object based middleware.
5. Improve the performance and reliability of distributed and parallel programs.

Internal Assessment consists of two tests. Test 1, an Institution level central test, is for 20 marks and is to be based on a minimum of 40% of the syllabus. Test 2 is also for 20 marks and is to be based on the remaining syllabus. Test 2 may be either a class test or assignment on live problems or course project

**Practical/Oral examination:**
Oral Examination will be based on above syllabus
Syllabus for Practical

Suggested topics for experiment but not limited to:

1. Load Balancing Algorithm.
2. Scalability in Distributed Environment
3. Client/server using RPC/RMI.
4. Inter-process communication
5. Election Algorithm.
6. Distributed Deadlock.
7. Name Resolution protocol.
8. Clock Synchronization algorithms.
11. CORBA architecture.

Reference Books

Objectives:
1. To introduce students to the basic concepts and techniques of Machine Learning.
2. To become familiar with regression methods, classification methods, clustering methods.
3. To become familiar with support vector machine and Dimensionality reduction Techniques.

Outcomes: Learner will be able to…
1. Ability to analyze and appreciate the applications which can use Machine Learning Techniques.
2. Ability to understand regression, classification, clustering methods.
3. Ability to understand the difference between supervised and unsupervised learning methods.
4. Ability to appreciate Dimensionality reduction techniques.
5. Students would understand the working of Reinforcement learning.

**Objectives:**
1. Develop, among students, an understanding of the technologies behind the embedded computing systems; and to differentiate between such technologies.
2. Make aware of the capabilities and limitations of the various hardware or software components.
3. Evaluate design tradeoffs between different technology choices.
4. Complete or partial design of such embedded systems

**Outcomes:** Learner will be able to…
1. Describe the special requirements that are imposed on embedded systems
2. Describe the key properties of microprocessor and digital signal processor
3. Sketch a design of an embedded system around a microprocessor or DSP
4. Explain how microprocessor, memory, peripheral components and buses interact in an embedded system
5. Evaluate how architectural and implementation decisions influence performance and power dissipation
6. Produce efficient code for embedded systems
7. Point out the role of the compiler in the embedded system design process
8. Define the properties of a real-time operating system
9. Estimate the requirement for additional hardware for optimized performance
10. Understand and distinguish between the RISC and the Advanced RISC architecture
11. Utilize embedded systems to perform operations such as signal processing in real time
12. Develop drivers for external peripheral devices as per requirement.

**Term Work:**

Term work should consist of at least 10 practicals and one mini project. Objective type term work test shall be conducted with a weightage of 10 marks.

The distribution of marks for term work shall be as follows:

- Laboratory work (experiments/projects): ................. (10) Marks.
- Mini project: ................................................................. (10) Marks.
- Attendance ................................................................. (05) Marks

**TOTAL: ................................................................. (25) Marks.**

The final certification and acceptance of Term Work ensures the satisfactory performance of laboratory work and minimum passing in term work.

**Internal Assessment:**

Internal Assessment consists of two tests. Test 1, an Institution level central test, is for 20 marks and is to be based on a minimum of 40% of the syllabus. Test 2 is also for 20 marks and is to be based on the remaining syllabus. Test 2 may be either a class test or assignment on live problems or course project

**Practical/Oral examination:**

Oral examination will be based on the above syllabus.
List of Experiments:

**Topic-1: Troubleshooting Tools [Any One]**

In-Circuit Emulator (ICE) and In-Circuit Debugger (ICD), Logic Analyzer, Spectrum Analyzer, Pattern generator and Digital Storage Oscilloscope.

**Topic -2: ARM Processors & Interfaces [Any Four]**

LEDs and Keyboard Interface, LCD Interface, Counting external events with on chip counters, Real Time Clock (RTC), Pulse Width Modulation (PWM), Relay and Buzzer Control for alarm events, Stepper Motor Control, On chip ADC/DAC SPI / I2C / UART Interface, Bluetooth/Zig-bee interface.

**Topic-3: Real-time Signal Processing ARM-DSP [Any Two]**

Real-time physical model simulation, Correlation, convolution, DFT, FIR or IIR design, Real-time DAS and GUI using PC and ARM, Design with Programmable Logic Devices (CPLD/FPGA).

**Topic-4: Device Driver Development [Any One]**

Drivers for CAN, Drivers for USB, Drivers for Ethernet, SVGA, Drivers for Graphics TFT LCD.

**Topic-5: Real Time Operating System (RTOS) [Any Two]**

RTLinux, MicroC/OS_II, VxWorks, WIN CE, QNX, Palm OS, Symbian OS, Android OS or equivalent OS.

Term Work:
- Term work should consist of at least 12 experiments.
- Journal must include at least 2 assignments.
- The final certification and acceptance of term work indicates that performance in laboratory work is satisfactory and minimum passing marks may be given in term work.

The distribution of marks for term work shall be as follows:
- Laboratory work (experiments): ………………. (15) Marks.
- Assignment:……………………………………….. (05) Marks
- Attendance ………………………………………….. (05) Marks

TOTAL: …………………………………………………….. (25) Marks.

Internal Assessment:
Internal Assessment consists of two tests. Test 1, an Institution level central test, is for 20 marks and is to be based on a minimum of 40% of the syllabus. Test 2 is also for 20 marks and is to be based on the remaining syllabus. Test 2 may be either a class test or assignment on live problems or course project.

Practical/Oral examination:
oral examination based on above syllabus will be conducted

Suggested Practicals for Adhoc Wireless

1. Installation of NS2 in Ubuntu 12.04 Linux.
2. Build and exchange data in simple infrastructure and Adhoc network by using personal computer and Android based mobile.
3. Develop sample wireless network in which
   a. implement AODV and AOMDV protocol
b. Calculate the time to receive reply from the receiver using NS2.
c. Generate graphs which show the transmission time for packet.

5. Configure Wireless Access Point (WAP) and build different networks.
6. Implement Mobile device as a wireless access point.
7. Communicate between two different networks which has following specifications:
   a. One network has Class A network with “Tora protocol”
   b. Second has Class B network “AODV protocol”

Practical exam will be based on the above syllabus.

Text Books:

Reference Books:
Objectives:
1. To focus on the procedures for identification, preservation, and extraction of electronic evidence, auditing and investigation of network and host system intrusions, analysis and documentation of information gathered, and preparation of expert testimonial evidence.
2. To provide hands on experience on various forensic tools and resources for system administrators and information system security officers.

**Term Work:**

- Term work should consist of at least 12 experiments.
- Journal must include at least 2 assignments.
- The final certification and acceptance of term work indicates that performance in laboratory work is satisfactory and minimum passing marks may be given in term work.

The distribution of marks for term work shall be as follows:

- Laboratory work (experiments): .......................... (15) Marks.
- Assignment: ..................................................... (05) Marks.
- Attendance ...................................................... (05) Marks

**TOTAL:** .......................................................... (25) Marks.

**Internal Assessment:**

Internal Assessment consists of two tests. Test 1, an Institution level central test, is for 20 marks and is to be based on a minimum of 40% of the syllabus. Test 2 is also for 20 marks and is to be based on the remaining syllabus. Test 2 may be either a class test or assignment on live problems or course project.

**Practical/Oral examination:**

Oral exam will be based on the above syllabus.

**Text Books:**

**References:**

Objectives:
1. To provide an overview of an exciting growing field of big data analytics.
2. To introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce.
3. To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
4. To enable students to have skills that will help them to solve complex real-world problems in for decision support.

Outcomes: Learner will be able to…
1. Understand the key issues in big data management and its associated applications in intelligent business and scientific computing.
2. Acquire fundamental enabling techniques and scalable algorithms like Hadoop, Map Reduce and NO SQL in big data analytics.
3. Interpret business models and scientific computing paradigms, and apply software tools for big data analytics.
4. Achieve adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc.

| 01     | **Introduction to Big Data**  
1.1 Introduction to Big Data, Big Data characteristics, types of Big Data, Traditional vs. Big Data business approach, Case Study of Big Data Solutions.                                           | 03   |
| 02     | **Introduction to Hadoop**  
2.1 What is Hadoop? Core Hadoop Components; Hadoop Ecosystem; Physical Architecture; Hadoop limitations.                                                                                                          | 03   |
| 03     | **NoSQL**  
3.1 What is NoSQL? NoSQL business drivers; NoSQL case studies;  
3.2 NoSQL data architecture patterns: Key-value stores, Graph stores, Column family (Bigtable) stores, Document stores, Variations of NoSQL architectural patterns;  
3.3 Using NoSQL to manage big data: What is a big data NoSQL solution? Understanding the types of big data problems; Analyzing big data with a shared-nothing architecture; Choosing distribution models: master-slave versus peer-to-peer; Four ways that NoSQL systems handle big data problems | 04   |
| 04     | **MapReduce and the New Software Stack**  
4.1 Distributed File Systems: Physical Organization of Compute Nodes, Large-Scale File-System Organization.  
4.2 MapReduce: The Map Tasks, Grouping by Key, The Reduce Tasks,                                                                 | 06   |
### Combiners, Details of MapReduce Execution, Coping With Node Failures

#### 4.3 Algorithms Using MapReduce
- Matrix-Vector Multiplication by MapReduce
- Relational-Algebra Operations, Computing Selections by MapReduce
- Computing Projections by MapReduce, Union, Intersection, and Difference by MapReduce, Computing Natural Join by MapReduce, Grouping and Aggregation by MapReduce, Matrix Multiplication, Matrix Multiplication with One MapReduce Step.

### 05 Finding Similar Items

5.1 Applications of Near-Neighbor Search, Jaccard Similarity of Sets, Similarity of Documents, Collaborative Filtering as a Similar-Sets Problem.

5.2 **Distance Measures**: Definition of a Distance Measure, Euclidean Distances, Jaccard Distance, Cosine Distance, Edit Distance, Hamming Distance.

### 06 Mining Data Streams

6.2 **Sampling Data in a Stream**: Obtaining a Representative Sample, The General Sampling Problem, Varying the Sample Size.

6.3 **Filtering Streams**: The Bloom Filter, Analysis.

6.5 **Counting Ones in a Window**: The Cost of Exact Counts, The Datar-Gionis-Indyk-Motwani Algorithm, Query Answering in the DGIM Algorithm, Decaying Windows.

### 07 Link Analysis

7.2 Topic sensitive Page Rank, link Spam, Hubs and Authorities.

### 08 Frequent Itemsets

8.2 **The SON Algorithm and MapReduce**

8.3 **Counting Frequent Items in a Stream**: Sampling Methods for Streams, Frequent Itemsets in Decaying Windows

### 09 Clustering

9.1 CURE Algorithm, Stream-Computing, A Stream-Clustering Algorithm, Initializing & Merging Buckets, Answering Queries
Term Work:

Assign a case study for group of 2/3 students and each group to perform the following experiments on their case-study; Each group should perform the exercises on a large dataset created by them.

The distribution of marks for term work shall be as follows:

- Programming Exercises: ........................................... (10) Marks.
- Mini project: .............................................................. (10) Marks.
- Attendance ............................................................... (05) Marks

TOTAL: ........................................................................... (25) Marks.

Internal Assessment:

Internal Assessment consists of two tests. Test 1, an Institution level central test, is for 20 marks and is to be based on a minimum of 40% of the syllabus. Test 2 is also for 20 marks and is to be based on the remaining syllabus. Test 2 may be either a class test or assignment on live problems or course project.

Practical/Oral examination:

An oral exam will be held based on the above syllabus.

Suggested Practical List: Students will perform at least 8 programming exercises and implement one mini-project. The students can work in groups of 2/3.

1. Study of Hadoop ecosystem
2. programming exercises on Hadoop
3. programming exercises in No SQL
4. Implementing simple algorithms in Map- Reduce (3) - Matrix multiplication, Aggregates, joins, sorting, searching etc.
5. Implementing any one Frequent Itemset algorithm using Map-Reduce
6. Implementing any one Clustering algorithm using Map-Reduce
7. Implementing any one data streaming algorithm using Map-Reduce
8. Mini Project: One real life large data application to be implemented (Use standard Datasets available on the web)
a. Twitter data analysis  
b. Fraud Detection  
c. Text Mining  etc.

Text Books:

1. Anand Rajaraman and Jeff Ullman “Mining of Massive Datasets”, Cambridge University Press, 
3. Dan McCreary and Ann Kelly “Making Sense of NoSQL” – A guide for managers and the rest of us, Manning Press.

| 01     | **Title:** Study of Cloud Computing & Architecture.  
         **Concept:** Cloud Computing & Architecture.  
         **Objective:** Objective of this module is to provide students an overview of the Cloud Computing and Architecture and different types of Cloud Computing  
         **Scope:** Cloud Computing & Architecture Types of Cloud Computing .  
         **Technology:** --- | 01 |
| 02     | **Title:** Virtualization in Cloud.  
         **Concept:** Virtualization  
         **Objective:** In this module students will learn, Virtualization Basics, Objectives of Virtualization, and Benefits of Virtualization in cloud.  
         **Scope:** Creating and running virtual machines on open source OS.  
         **Technology:** KVM, VMware. | 02 |
| 03     | **Title:** Study and implementation of Infrastructure as a Service.  
         **Concept:** Infrastructure as a Service.  
         **Objective:** In this module student will learn Infrastructure as a Service and implement it by using OpenStack.  
         **Scope:** Installing OpenStack and use it as Infrastructure as a Service .  
         **Technology:** Quanta Plus /Aptana /Kompozer | 02 |
| 04     | **Title:** Study and installation of Storage as Service. | 02 |

**Outcomes:** Learner will be able to…
1. Appreciate cloud architecture  
2. Create and run virtual machines on open source OS  
3. implement Infrastructure , storage as a Service.  
4. Install and appreciate security features for cloud

| 02 |
| **Title:** Case study on Amazon EC2.  
**Concept:** Amazon EC2  
**Objective:** in this module students will learn about Amazon EC2. Amazon Elastic Compute Cloud is a central part of Amazon.com's cloud computing platform, Amazon Web Services. EC2 allows users to rent virtual computers on which to run their own computer applications | **Title:** Case study on Microsoft azure.  
**Concept:** Microsoft Azure  
**Objective:** students will learn about Microsoft Azure is a cloud computing platform and infrastructure, created by Microsoft, for building, deploying and managing applications and services through a global network of Microsoft-managed datacenters. How it work, different services provided by it.  
**Technology:** Microsoft azure | 10 |
| 01 |
| **Title:** Mini project.  
**Concept:** using different features of cloud computing creating own cloud for institute, organization etc.  
**Objective:** is student must be able to create own cloud using different features which are learned in previous practices.  
**Scope:** creating a cloud like social site for institute.  
**Technology:** any open system used for cloud | 12 |
| 05 |
Term Work:

- Term work should consist of at least 6 experiments and a mini project.
- Journal must include at least 2 assignments.
- The final certification and acceptance of term work indicates that performance in laboratory work is satisfactory and minimum passing marks may be given in term work.

The distribution of marks for term work shall be as follows:

- Laboratory work (experiments): ……………………….. (15) Marks.
- Mini project presentation: ………………………………… (05) Marks.
- Attendance ………………………………………. (05) Marks

TOTAL: …………………………………………… (25) Marks.

Text Books:

4. www.openstack.org
Guidelines for Project
- Students should do literature survey/visit industry/analyze current trends and identify the problem for Project and finalize in consultation with Guide/Supervisor. Students should use multiple literatures and understand the problem.
- Students should attempt solution to the problem by experimental/simulation methods.
- The solution to be validated with proper justification and report to be compiled in standard format.

Guidelines for Assessment of Project I
- Project I should be assessed based on following points
  - Quality of problem selected
  - Clarity of Problem definition and Feasibility of problem solution
  - Relevance to the specialization
  - Clarity of objective and scope
  - Breadth and depth of literature survey
- Project I should be assessed through a presentation by the student project group to a panel of Internal examiners appointed by the Head of the Department/Institute of respective Programme.

Guidelines for Assessment of Project II
- Project II should be assessed based on following points
  - Quality of problem selected
  - Clarity of Problem definition and Feasibility of problem solution
  - Relevance to the specialization / Industrial trends
  - Clarity of objective and scope
  - Quality of work attempted
  - Validation of results
  - Quality of Written and Oral Presentation
- Report should be prepared as per the guidelines issued by the University of Mumbai.
- Project II should be assessed through a presentation by the student project group to a panel of Internal and External Examiners approved by the University of Mumbai.
- Students should be motivated to publish a paper based on the work in Conferences/students competitions.
