Continuous Assessment (A):

Course	Assessment Tools	Marks	Time (hrs.)	
	One Term test (based on 40 % syllabus)	25 each	1	
Theory	Second Term test (next 40 % syllabus) / presentation / assignment / course project / group discussion / any other.	(Avg.25)		
Audit course	Performance in the assignments / quiz / power point presentation / poster presentation / group project / any other tool.		as applicable	
Laboratory	Performance in the laboratory and documentation.	25		
Tutorial	Performance in each tutorial & / assignment.	25		
Laboratory &Tutorial	Performance in the laboratory and tutorial.	25		

The final certification and acceptance of term work will be subject to satisfactory performance upon fulfilling minimum passing criteria in the term work / completion of audit course.

SVKM

Semester End Assessment (B):

Course	Assessment Tools	Marks	Time (hrs.)
Theory /	Written paper based on the entire syllabus.		
* Computer based	* Computer based assessment in the college premises.	75	3
Oral	Questions based on the entire syllabus.	25	as applicable
Practical	Performance of the practical assigned during the examination and the output / results obtained.	25	2
Oral & Practical	Project based courses - Performance of the practical assigned during the examination and the output / results obtained. Based on the practical performed during the examination and on the entire syllabus.	as per the scheme	2

Minor in Green Technologies and Sustainability Engineering

Semester: V

Program: Common for All Programs (except Chemical Engineering)

Course: Green Technologies and Practices (DJ19MN1C1)

Pre-requisite: --

- 1. Engineering Chemistry I
- 2. Engineering Chemistry II

Objectives:

- 1. To acquire Knowledge on the concept of green technologies.
- 2. To understand the principles of green chemistry in the Energy efficient technologies.
- 3. To analyze the methods of reducing CO₂ levels in atmosphere for cleaner production project development and implementation.
- 4. To evaluate the methods of pollution prevention and cleaner production awareness plan.
- 5. To analyze the application of energy efficacy.
- 6. To apply the knowledge of green fuels during implementation.

Outcomes: On completion of the course, the learner will be able to:

- 1. Enlist different concepts of green technologies in a project.
- 2. Describe the principles of green chemistry in the Energy efficient technologies.
- 3. Select the best method for the carbon credits of various activities for cleaner production project development and implementation.
- 4. Evaluate the importance of life cycle assessment for pollution prevention and cleaner production awareness plan.
- 5. To apply the problems related to pollution prevention and cleaner production awareness plan.
- 6. To choose the green fuels based on their benefits for sustainable development.

Green	Green Technologies and Practices (DJ19MN1C1)								
Unit	Description	Duration							
1	Introduction to green technology								
	1.1 Definition – importance – Historical Evolution – advantages and disadvantages of								
	green technologies.								
	1.2 Factors affecting green technologies.								
	1.3 Role of industry, Government and Institutions- Industrial Ecology.								
	Role of Industrial ecology in green technology.								
2	Green chemistry								
	2.1 Principles of green chemistry, green chemistry metrics- atom economy.	08							
	2.2 E factor, reaction mass efficiency.								
	2.3 Waste: Source of waste, different type of waste.								

	2.4 Chemical, physical and biochemical methods of waste minimization.	
	2.5 Clean development Mechanism: reuse, recovery & recycle.	
	2.6 Raw Material substitution: Wealth from waste, case studies.	
3	Cleaner production project development and implementation	
	3.1 Overview of CP Assessment steps and skills, process flow diagram.	09
	3.2 Material Balance, CP Option Generation: Technical and Environmental Feasibility	
	analysis.	
	3.3 Economic valuation of alternatives: Total cost Analysis - CP Financing.	
	3.4 Preparing a program plan: Measuring progress - ISO 14000.	
	Della d'an Duran d'an and sharman du d'an Arnana Dian	10
4	Pollution Prevention and cleaner production Awareness Plan 4.1 Waste audit: Environmental Statement.	10
	4.2 Carbon Credit, Carbon Trading, Carbon footprint.	
	4.3 Carbon Sequestration.	
	4.4 Life Cycle Assessment – Elements of LCA.	
	4.5 Life cycle Costing.	
	4.6 Eco Labeling.	
5	Energy Efficacy.	
	5.1 Availability and need of conventional energy resource: major environmental problems	08
	related to the conventional energy resources.	
	5.2 Future possibilities of energy need and availability.	
	5.3 Non- conventional energy sources: Solar Energy – solar energy conversion	
	technologies and devices.	
	5.4 Solar Energy: Principles, working and application.	
6	Green fuels	
	6.1 Definition – benefits and challenges: Comparison of green fuels with conventional fossils	10
	fuels with reference to environmental, economic and social impacts - public policies and	
	market driven initiatives.	
	6.2 Biomass energy: Concept of biomass energy utilization, types if biomass energy.,	
	conversion process.	
	6.3 Wind energy, energy conversion technologies, their principles, equipment and suitability	
	in Indian context.	
	6.4 Tidal and geothermal energy.	
	Total	52

Minor in Intelligent Automation and Applied Analytics

Semester: V

Program: Common for All Programs (except Electronics Engineering)

Course: Fundamentals of Industrial Automation (DJ19MN2C1)

Pre-requisite: --

1. Basic Electrical & Electronics Engineering

Objectives:

- 1. To understand & make aware the sensory & actuation environment required for Industry 4.0
- 2. To make aware various controlling & communication strategies & provide a brief overview of DCS & SCADA systems in Industrial Automation
- 3. To design basic control systems using PLC architecture & ladder programming

Outcomes: On completion of the course, the learner will be able to:

- 1. Understand and demonstrate application of sensing and actuation in an industrial environment.
- 2. Comprehend PLC architecture and implementation of Ladder Programming.
- 3. Comprehend DCS & SCADA Systems and interpret various industrial communication protocols.

Fund	amentals of Industrial Automation (DJ19MN2C1)	
Unit	Description	Duration
1	Introduction Automation in production system, Principles and strategies of automation, Basic elements of an automated system, types of Automation, Hierarchical level in automation, Advanced automation functions, Automated flow lines and transfer mechanisms.	8
2	 Sensors Introduction to Industrial Measurement; overview of sensors & transducers, classification of sensors - analog, digital, electrical, mechanical; characteristics of sensors, specifications, selection of sensors, basic interfacing and block diagram of instrumentation system. Temperature sensors: Resistance Temperature Detectors Pt100/1000, Ceramic Thermistors-NTC & PTC (Thermistor Bead), Semiconductor PN junction sensors-LM35, Thermopile- MLX 90614, Pyroelectric sensors. Pressure sensors: Concept of Pressure, Semiconductor pressure sensor, Pressure MEMS sensor (HX710B). 	8

	Ultrasonic Sensors, Electromagnetic sensors, Resistive Humidity Sensors, Chemical	
	sensors - Taguchi Gas, Combustible Gas, and pH Sensors.	
3	Actuators	8
	Electrical actuators: Relays, solenoids & electrical motors (DC, AC & stepper	
	motor).	
	Pneumatic actuators: Basic pneumatic system, pneumatic compressors (piston, vane,	
	screw) flapper nozzle, single & double acting cylinder, rotary actuator, filter-	
	regulator-lubricator (FRL).	
	Hydraulic actuator: Hydraulic pumps, control valve types (globe, ball, needle,	
	butterfly, gate, diaphragm & pinch), cavitation & flashing with their remedies.	
4	Controller strategy / Automation Tools, PLC	10
	Discrete state process controller: Discrete state variables, process specifications &	
	event sequence description.	
	Relay controller & ladder diagram: Introduction to relay ladder diagram logic,	
	ladder diagram elements & ladder diagram programming examples.	
	PLC: Relay sequencers, programmable logic controller design, PLC operation,	
	programming the PLC, PLC software functions (application examples on relay	
	ladder logic programming).	
5	SCADA, DCS & HMI	10
	SCADA: Overview, SCADA Architecture, SCADA-Hardware functions, SCADA	
	applications, case study examples.	
	DCS: Overview and Features of DCS, DCS Architecture, Hardware elements,	
	working of DCS, DCS displays, DCS interfacing with PLC, DCS wiring diagram.	
	HMI: Overview, need, Types, wiring practice, Data Handling, configuration and	
	interfacing with PLC & PC, Communication standards. ASM Graphics.	
6	Communication protocols	8
	Overview of sensor networks, ASi interface protocol, CAN, HART, Foundation	
	Fieldbus, Profibus, INTERBUS, M-Bus, Wireless sensor network, Bluetooth,	
	Zigbee, LoRa.	
	Total	52

Minor in Web Application Development

Semester: V

Program: Common to All Programs (except Computer Engineering)

Course: Advanced Java Programming (DJ19MN3C1)

Pre-requisite:

- 1. Basic Programming
- 2. Java Programming

Objectives:

- 1. To enable the students to understand the concepts of advanced Java programming.
- 2. To enable students to learn to produce well-designed, dynamic Web applications.

Outcomes: On completion of the course, the learner will be able to:

- 1. Read and make elementary modifications to Java programs that solve real-world problems.
- 2. Learn to access database through Java programs, using Java Data Base Connectivity (JDBC)
- 3. Create dynamic web pages, using Servlets and JSP
- 4. Implement the web-based applications using effective database access with rich client interaction

Advanced Java Programming (DJ19MN3C1)								
Description	Duration							
Introducing Classes: Class Fundamentals, Declaring Objects, Assigning Object	08							
Reference Variables, Introducing Methods, Constructors, The this Keyword,								
Garbage Collection, The finalize() Method, A Stack Class, A Closer Look at								
Methods and Classes: Overloading Methods, Using Objects as Parameters, A								
Closer Look at Argument Passing, Returning Objects, Recursion, Introducing								
Access Control, Arrays, Inheritance: Inheritance, Using super, Creating a								
Multilevel Hierarchy, When Constructors Are Called, Method Overriding,								
Dynamic Method Dispatch, Using Abstract Classes, Using final with Inheritance,								
The Object Class.								
Packages and Interfaces: Packages, Access Protection, Importing Packages,	08							
Interfaces, Exception Handling: Exception-Handling Fundamentals, Exception								
Types, Uncaught Exceptions, Using try and catch, Multiple catch Clauses, Nested								
try Statements, throw, throws, finally, Java's Built-in Exceptions, Creating Your								
Own Exception Subclasses, Chained Exceptions, Using Exceptions.								
Swing: Need for swing components, Difference between AWT and swing,	08							
Components hierarchy, Panes, Swing components: Jlabel, JTextField and								
JPasswordField, JTextAres, JButton, JCheckBox, JRadioButton, JComboBox								
and JList								
JDBC: Introduction, JDBC Architecture, Types of Drivers, Statement, ResultSet,	08							
Read Only ResultSet, Updatable ResultSet, Forward Only ResultSet, Scrollable								
ResultSet, PreparedStatement, Connection Modes, SavePoint, Batch Updations,								
Callable Statement, BLOB & CLOB								
	DescriptionIntroducing Classes: Class Fundamentals, Declaring Objects, Assigning ObjectReference Variables, Introducing Methods, Constructors, The this Keyword,Garbage Collection, The finalize() Method, A Stack Class, A Closer Look atMethods and Classes: Overloading Methods, Using Objects as Parameters, ACloser Look at Argument Passing, Returning Objects, Recursion, IntroducingAccess Control, Arrays, Inheritance: Inheritance, Using super, Creating aMultilevel Hierarchy, When Constructors Are Called, Method Overriding,Dynamic Method Dispatch, Using Abstract Classes, Using final with Inheritance,The Object Class.Packages and Interfaces: Packages, Access Protection, Importing Packages,Interfaces, Exception Handling: Exception-Handling Fundamentals, ExceptionTypes, Uncaught Exceptions, Using try and catch, Multiple catch Clauses, Nestedtry Statements, throw, throws, finally, Java's Built-in Exceptions, Creating YourOwn Exception Subclasses, Chained Exceptions, Using Exceptions.Swing: Need for swing components, Difference between AWT and swing,Components hierarchy, Panes, Swing components: Jlabel, JTextField andJPasswordField, JTextAres, JButton, JCheckBox, JRadioButton, JComboBoxand JListJDBC: Introduction, JDBC Architecture, Types of Drivers, Statement, ResultSet,Read Only ResultSet, Updatable ResultSet, Forward Only ResultSet, ScrollableResultSet, PreparedStatement, Connection Modes, SavePoint, Batch Updations,

Minor in Robotics

Program: Common for All Programs (except Mechanical Engineering)

Course: Introduction to Robotics (DJ19MN5C1)

Pre-requisite:

- 1. Knowledge of basic elements of mechanical engineering
- 2. Knowledge of electrical engineering like motors & drives
- 3. Knowledge of instrumentation related topics like sensors & applications
- 4. Basic knowledge of control systems engineering

Objectives:

- 1. To impart knowledge of the fundamental concepts of robotics in the modern-day world from the olden days.
- 2. Make the student know the anatomical structure of the fixed & mobile robots with actuating systems.
- 3. To develop the student's knowledge in various types of sensors & its applications.
- 4. Making the robotic system to know how to do robotic manipulation using different types of end-effectors, viz., the tools & grippers.
- 5. To introduce the basic principles, techniques, state of art techniques in robot programming with control strategies.
- 6. Make the learner know about the different types of applications of robots in the modernday world.

Outcomes: On completion of the course, the learner will be able to:

- 1. Remember the basic structure of robots with their mathematical interpretations in the 3dimensional analysis.
- 2. Understand the kinematic analysis while doing the PNPO.
- 3. Apply the knowledge of mathematics in developing all possible solutions to the inverse kinematic analysis while doing the PNPO.
- 4. Analyze the area in which the robot can do the effective PNPO with a well-defined optimized shortest path trajectory.
- 5. Evaluate the performance of difference learning schemes used for solving a typical robotic application using AI concepts.
- 6. Create a typical robotic application to solve any type of automated works without human intervention.

Module	Introduction to Robotics - DJ19MEHN1C1	Hours
1	Introduction to Robotics : to automation & its types, History & evolution of	0
1	robotics, Definition of robots, Robotic manipulators, Types of robots,	

Semester: V

[Generations of robots, Laws of robotics, Classification of robots & its	
	applications, Specifications of robots.	
2	Robot Anatomy : Anatomy of robots, Drive systems, Actuators and Power Transmission systems, Types of drives & its applications, Hydraulic drives, Pneumatic drives, Electric drives, Hybrid drives, Robot activation & feedback components.	9
3	Sensors in robotics : Touch Sensors, Tactile Sensors, Proximity & Range Sensors, Sensor Based Systems, Force Sensors, Light sensors, Pressure sensors, Ultrasonic sensors, Infra-red sensors, Pots, Encoders, Position & Velocity Sensors.	9
4	Articulated Mechanical System: Materials used for robot design & its properties, Transmission devices in robots & its types, End effectors, Types of end effectors, Tools & Grippers, Classification of tools & grippers, Types of tool & gripper actuations.	9
5	Robot Controllers & Programming : Robot brain, Controller & its types, Need for controller in robots, Robot simulation, Robot software, Robot Programming & the Languages, Types of robot programming, Industrial robot programming.	8
6	Robot Applications : Industrial applications of robots, Medical, Household, Entertainment, Space, Underwater, Defense, Social, Environmental & economic issues in robot applications, Advantages & Disadvantages of Robotization.	8

Minor in Artificial Intelligence and Machine Learning

Semester: V

Program: Common for All Programs (except Information Technology)

Course: Artificial Intelligence (DJ19MN6C1)

Pre-requisite:

- 1. Knowledge of any programming language
- 2. Data Structures

Course Objectives:

- 1. To create thorough understanding of AI basics and real-time applications in its sub-domains.
- 2. To explores AI techniques like informed, uninformed, and adversarial searching to solve real-life problems in a state space tree representation.
- 3. Familiarize learner to the advance topics of AI such as planning, handling uncertainty.

Course Outcomes: On completion of the course, the learner will be able to:

- 1. Understand the basics of artificial intelligence
- 2. Solve the problem using appropriate AI techniques.

Detaile	d Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction: Definition, Future of Artificial Intelligence, Characteristics of Intelligent Agents, Typical Intelligent Agents, Problem Solving Approach to Typical AI problems Intelligent Systems : Introduction to AI, Components of AI, AI Problems and AI Techniques, solving problems by searching, Problem Formulation, State Space Representation. Intelligent Agents: Structure of Intelligent agents, Types of Agents, Agent Environments	[
	PEAS representation for an Agent.	
2	 Problem solving Methods: Types: Uninformed, Informed - Heuristics based. Uninformed Search: DFS, BFS, Uniform cost search, Depth Limited Search, Iterative Deepening. Informed Search: Heuristic functions, Best First Search, A* algorithm Local Search Algorithms and Optimization Problems - Hill Climbing, Simulated Annealing Searching with Partial Observations Constraint Satisfaction Problems: Crypto Arithmetic, Map Coloring, N-Queens Backtracking Search Adversarial Search: Game Playing, Min-Max Search, Alpha Beta Pruning 	l
3	Knowledge Representation and Inference : A Knowledge Based Agent, Knowledge representation technique: Logical Representation, Semantic Network Representation Frame Representation, Production Rules. Overview of Propositional Logic, First Order Predicate Logic, Inference in First Order Predicate Logic: Forward and Backward Chaining, Resolution.	l

4	Uncertain Knowledge and Reasoning : Uncertainty, Representing Knowledge in an Uncertain Domain, Conditional Probability, Joint Probability, Bayes' theorem, Belief	08								
	Networks, Simple Inference in Belief Networks.									
5	Theory of Learning : Types (Supervised Learning, Unsupervised Learning, Reinforcement learning), PAC learning. Introduction to statistical learning, Learning from Rewards, Passive Reinforcement Learning, Active reinforcement Learning	06								
6	 Applications of AI: AI Domains: NLP, ML, Deep Learning, Data Science, Cognitive Science. Introduction to Expert Systems- Definition, Characteristics, architecture, Knowledge Engineering, Building Expert Systems. Methodologies for building expert systems: knowledge acquisition and elicitation; formalization; representation and evaluation. Knowledge Engineering tools. 	06

Minor in Electric Vehicles

Program: Common for All Programs (except Mechanical Engineering)

Course: Fundamentals of Electric Vehicles (DJ19MN7C1)

Pre-requisite:

1.Basic of electronics and electrical engineering

2.fundamentals of physics and engineering mechanics

Objectives:

- 1. To study different automotive components and subsystems
- 2. To explore the transition of automotive domain from Internal Combustion Engine to electric vehicles

Outcomes: On completion of the course, the learner will be able to:

- 1 To explain the basic of Electric vehicles and its major parts.
- 2. To define the functionality and working principles of different types of Automotive Powertrains
- 3. To illustrate the working of various automotive transmission systems
- 4. To explain vehicle fundamentals of various subsystem.
- 5. To illustrate the working of motors and conversions.

6. To identify and illustrate the various hybrid electric powertrains and their different modes of operations

Electr	ic Vehicles (DJ19MEHN1C1)	
Unit	Description	Duration
1	Electric Vehicles History, Basics of Electric Vehicles ,Components of Electric Vehicle, General Layout of EV, EV classification : Battery Electric Vehicles (BEVs), Fuel-Cell Electric Vehicles (FCEVs) Comparison with Internal Combustion Engine: Technology, Advantages & Disadvantages of EV, National Policy for adoption of EVs, Overview of Tesla car.	10
2	Vehicle Mechanics History of Vehicle Development, General Configuration of Automobile, Body and Chassis Fundamentals: General Packaging, Types of Structural System, Backbone Construction; Body and Chassis Materials. Automotive Powertrain Mechanical, Suspensions system, Steering System, NVH, Control System Integration and Implementation. Front-Wheel Drive (FWD) Powertrains, Rear-Wheel Drive Powertrains (RWD), Multi-Wheel Drive Powertrains (AWD and 4WD).	10
3	Transmission Systems Transmission gears, Manual Transmission (MT), Automatic Transmission (AT), Automated Manual Transmissions (AMT) and Continuously Variable Transmissions (CVT); Manual Transmissions Powertrain Layout and Manual Transmission Structure, Power Flows and Gear Ratios, Manual Transmission Clutch and its structure. Drivetrain and Differential.	10

Semester: V

Vehicle fundamentals	10
Vehicle resistance, Types: Rolling Resistance, grading resistance, Aerodynamic drag	
vehicle performance, Calculating The Acceleration Force, maximum speed, Finding The	
Total Tractive Effort, Torque Required On The Drive Wheel, Transmission: Differential,	
clutch &gear box, Braking performance.	
Conversions and motors	6
Introduction of DC-DC, AC-AC ,AC-DC, DC-AC, four-quadrant operation, Driver circuits.	
Principle and working of DC motor, Characteristics and Types of DC Motors-	
Overview (Speed torque characteristics) of Permanent Magnet motor, BLDC Motor,	
Induction motor. Comparison of all motors.	
Hybrid Powertrain: Series HEVs, Parallel HEVs, Series–Parallel HEVs, Complex HEVs,	6
Operating Modes, Degree of Hybridization, Comparison of HEVs, Plug-in Hybrid Electric	
Vehicles (PHEVs) Real Life examples of HEVs, compare and contrast the performance of	
ICE vehicles, HEVs and EVs.

Minor in IoT and Industry 4.0

Semester: V

Program: Common for All Programs (except Electronics & Telecommunication Engineering)

Course: Sensor Technology (DJ19MN8C1)

Pre-requisite: --

1. Basics of Electrical and Electronics Engineering

Objectives:

- 1. To provide understanding of physical parameters and sensing techniques of various sensors.
- 2. To provide Understanding about signal conditioning principle.
- 3. To familiarize about MEMS sensors and actuators.

Outcomes: On completion of the course, the learner will be able to:

- 1. To understand the transduction principle of various sensors
- 2. To select sensors suitable for required application
- 3. To analyze wireless sensing technique
- 4. To design data acquisition system.
- 5. Identify signal conditioning method for particular application

IoT ar	nd Industry 4.0 (DJ19MN8C1)								
Unit	Description	Duration							
1	Classification and Performance Characteristics of Sensors and Actuators:	10							
	Classification of Sensors and Actuators: General Requirements for Interfacing, Units and								
	Measures, Transfer function, Impedance and Impedance matching, Range, Span, Resolution,								
	Accuracy, Errors, Repeatability, Sensitivity and Sensitivity analysis, Hysteresis, Nonlinearity								
	and saturation, Frequency Response, Response Time and Bandwidth, Calibration, Excitation,								
	Deadband, Reliability.								
2	Temperature and Optical Sensors and Actuators:	10							
	Thermo resistive Sensors: Thermistors, Resistance temperature sensors, Silicon resistive								
	sensors, Thermoelectric sensors, PN Junction Temperature sensors, Optical and Acoustical								
	sensors, Thermo mechanical sensors and Actuators.								
	Optical Sensors and Actuators: Effects of Optical Radiation, Quantum Based Optical sensors,								
	Photoelectric sensors, Coupled Charge (CCD) sensors and Detectors, Thermal Based Optical								
	sensors, Optical Actuators.								
3	Electric, Magnetic, Mechanical Sensors and Actuators:	10							
	Electric Field: Capacitive Sensors and Actuators								
	Magnetic Field: Inductive sensors and Hall effect sensors, Sensors and Actuators,								
	Magnetometers Magnetic Actuators, Voltage and Current sensors.								

	Mechanical sensors and Actuators, Radiation sensors, Accelerometers, Pressure sensors,	
	Gyroscopes.	
4	Signal Conditioning:	06
	Fundamentals of data Acquisition: Analog and Digital Data acquisition system with different	
	configurations, data loggers, noise and interference.	
	Signal Conditioning: Wheatstone bridge, Flash ADC, R2R DAC.	
	Utilization of Signal Conditioning circuits for Temperature, Pressure, Optical, Strain Gauges,	
	Displacement and Piezoelectric transducers.	
5	Current Trends in sensors:	10
	Introduction, Primary sensors, Excitation, Amplification, Filters, Converters, Compensation,	
	Information Coding/Processing, Data Communication, Standards for Smart sensor interface,	
	The Automation Sensor Technologies: Introduction, Film Sensors, Thick Film Sensors, Thin	
	Film sensors, Semiconductor IC Technology Standard Methods, Microelectromechanical	
	Systems (MEMS), Nano-sensors Sensor Applications: On-board Automobile sensors, Home	
	appliances sensors, Aerospace sensors, Sensors for Environmental Monitoring Self-learning	
	Topics: Energy Harvesting, Self-powered Wireless Sensing in ground, Ground penetrating	
	sensors.

Minor in Data Science

Semester: V

Program: Common for All Programs (except Computer Science and Engineering (Data Science)

Course: Foundations of Data Analysis (DJ19MN4C1)

Pre-requisite:

1. Basic Mathematics

Objectives:

1. To develop skills of data analysis techniques for data modelling.

Outcomes: On completion of the course, the learner will be able to:

- 1. Apply visualization techniques to understand Data.
- 2. Apply ETL and perform OLAP operation.
- 3. Use descriptive statistics to analyses data.
- 4. Perform various techniques to improve quality of data.
- 5. Apply appropriate feature engineering technique to prepare data for modelling.

Detailed Syllabus: (unit wise)

Detun									
Unit	Description	Duration							
1.	Data Warehouse, ETL and OLAP: Data cube: multidimensional data model, star, snowflake and fact consolidation, dimension and measures, Major steps in ETL process, Data extraction, Data transformation, Data Loading, OLTP Vs OLAP, OLAP definition Dimensional Analysis, Hypercube, OLAP operations: Drill down, Roll up, Slice, Dice and Rotation, OLAP models: MOLAP, ROLAP.								
2.	Data visualization:	10							
	Data visualization process, importance of data visualization, types of data: quantitative (numeric),								
	qualitative (categorical), principles for data visualization, Temporal: Scatter plots, Time Series								
	sequences, Line graphs; Hierarchal: Tree diagrams, Ring charts; Network: Matrix charts, Node-								
	link diagrams, Word clouds, Alluvial diagrams; Multidimensional: Pie chart, Venn diagrams,								
	Stacked bar graph, Histograms; Geospatial: Flow map, Density map, Heat maps, data Visualization								
	using Tableau, Dashboards, storytelling.								
3.	Descriptive Statistics:	08							
	Types of statistics, population vs sample								
	Measures of Central Tendency: arithmetic mean, properties, weighted mean, properties, median,								
	mode, grouped and ungrouped data, empirical relation between the mean, median and mode,								
	geometric mean, harmonic mean, relation between arithmetic, geometric and harmonic mean, outlier.								
	Measures of Dispersion: range, quartile deviation, mean deviation, standard deviation, properties,								
	variance, root mean square deviation, empirical relations between measures of dispersion, absolute								
	and relative dispersion, coefficient of variation, moments, Pearson's β and γ coefficients, skewness,								
	kurtosis, population parameters and sample statistics, histogram, frequency polygon								
	Measures of position: quartiles, interquartile range, semi interquartile range, percentiles, percentile rank, 10–90 percentile range, box and whisker plot								

4.	Data Preprocessing	10
	Data Quality: measurement error, data collection error, noise, artifacts, precision, bias, accuracy,	
	outliers, missing values, inconsistent values, duplicate values	
	Data Cleaning: handling missing values and noisy data	
	Data Transformation: smoothing, attribute construction, aggregation, normalization; Data	
	Discretization: binning, histogram analysis, cluster	
	Outlier detection: types of outliers, challenges, statistical method, proximity-based method,	
	clustering-based method	
5.	Examining Relationship	04
	Correlation: Scatter plot, covariance, Karl Pearson's coefficient of correlation, hypothesis test for	
	correlation, correlation vs causation, extreme data values, limits of correlation coefficient, Rank	
	correlation, Spearman's rank correlation coefficient, Repeated ranks, partial and multi correlation	
6.	Feature Engineering	08
	Curse of Dimensionality, Feature selection: Univariate methods (Pearson correlation, F score, Chi-	
	square, Signal to noise ratio) and Multivariate methods (Forward selection, backward selection and	
	stepwise selection). Feature Transformation using PCA.	

Text books:

- 1. Data Preparation for Machine Learning, Jason Browniee, ebook by Machine Learning Mastry. Best Practices in Data Cleaning: A Complete Guide to Everything you Need to Do Before and After Collecting Your Data, Jason Osborne, Sage Publication, 2012.
- 2. Feature Engineering and Selection: A practical Approach for Predictive Models, Max Kuhn and Keijell Statistical Methods, S. P. Gupta, Sultan Chand, 2014, forty third edition
- 3. Think Stats: Probability and Statistics for Programmers, Allen B. Downey, Green Tea Press, 2011 Johnson, CRC Press, 2020.

Reference Books:

- 1. The Big Book of Dashboards: Visualizing your Data using Readl-World Business Scenarios, Jeffrey Shaffer, Steve Wexier, Andy Cotgreave, and Wiley 2017.
- 2. Bad Data Handbook: Cleaning Up the Data so you can get back to work, Ethan McCallum, O'Reilly, 2012.
- 3. Fundamentals of mathematical statistics, S.C.Gupta and V.K.Kapoor, second edition, Sultan Chand Publisher.
- 4. Data Warehousing Fundamentals: A Comprehensive Guide for IT Professionals, Paulraj Ponniah, Wiley, Second Edition, Practical Tableau, Rayan Sleeper, O'Reilly 2018.
- 5. Data Mining Concepts and Techniques, Han, Kamber, Morgan Kaufmann 3nd Edition.
- 6. Python for Data Analysis, Wes McKinney, O'Reilly, Second Edition, 2018.
