## Semester End Assessment (A):

Course	Assessment Tools	Marks	Time (hrs.)
Theory	Written paper based on the entire syllabus	60	2
Oral	Questions based on the entire syllabus.	25	As applicable
Practical	Performance of the practical assigned during the examination and the output / results obtained.	25	2
Oral & Practical	Project based courses - Performance of the practical assigned during the examination and the output / results obtained. Based on the practical performed during the examination and on the entire syllabus.	As per the scheme	2

## Continuous Assessment (B):

Course	Assessment Tools	Marks	Time (mins)
	a. Term Test 1 (based on 40 % syllabus)	15	45
Theory	b. Term Test 2 (on next 40 % syllabus)	15	45
Theory	c. Assignment / course project / group discussion / presentation / quiz/ any other.	10	
	Total marks $(a + b + c)$	40	
Audit course	Performance in the assignments / quiz / power point presentation / poster presentation / group project / any other tool.		As
Laboratory / Tutorial	Performance in the laboratory, tutorial & / assignment. (ICA Component Evaluation).	25	applicable

The final certification and acceptance of term work will be subject to satisfactory performance upon fulfilling minimum passing criteria in the term work / completion of audit course.

#### Pre-requisite: Knowledge of

- 1. Manufacturing systems.
- 2. Various stages of Product life cycle.

#### **Objectives:**

- 1. To understand overall aspects of manufacturing systems and the manufacturing supporting systems.
- 2. To understand the CIM database and database management system of a manufacturing firm.
- 3. To understand the functioning of computer integrated manufacturing Enterprise.

- 1. Understand the basic principles of CIM and its elements.
- 2. Distinguish different types of inspection methods.
- 3. Emphasis the importance of group technology and cellular manufacturing systems.
- 4. Design automated material handling and storage systems for a typical production system.
- 5. Understand the importance of data communications in CIM environment.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction to CIM: Introduction to CIM, Evolution, objectives, benefits, limitations,	07
	relationship between automation and CIM, CIM hardware and software, role and functioning	
	of elements of CIM, CIM Wheel.	
2	Computer Process Monitoring and Control:	08
	Computer Process Monitoring: Data logging Systems-Data acquisition systems- Multilevel	
	scanning.	
	Computer Control: Computer-Process Interfacing-Manufacturing Process Data- System	
	Interpretation of Process Data-Interface Hardware Devices-Digital Input /Output Processing	
	Interrupt system-Control programming-Computer Process Control-Structural Model of a	
	Manufacturing Process- Process Control Strategies-Distributed Control versus Central	
	Control- Supervisory Computer Control.	
3	Development and implementation of an FMS:	06
	Planning phase, Integration, System configuration, FMS layouts, Simulation, FMS Project	
	development steps. Project management, Equipment development, Host system development,	
	planning, Hardware & Software development.	
	Automated Material Handling & Storage:	
	Functions, Types, Analysis of material handling equipment's, Design of Conveyor & AGV	
	systems. Problems. Development for total material handling system (Case study: Automatic	
	Identification and data capturing).	
4	Computer Aided Process Planning and Quality Control	07
	CAPP: Introduction and types.	
	CAQC: Introduction to inspection and testing. Automated inspection principles and methods-	
	When and where to inspect, quantitative analysis of inspection, inspection technologies –	
	contact and non-contact types. Computer aided testing.	<b>.</b>
5	<b>Cellular Manufacturing Systems:</b> Part Families, Parts Classification and Coding, Features	07
	of Parts Classification and Coding Systems, Opitz of Parts Classification and Coding	
	Systems, Production Flow Analysis, Composite Part Concept, Machine Cell Design,	
	Applications Of Group Technology, Quantitative analysis of Cellular Manufacturing,	
	Grouping of parts and Machines by Rank Order Clustering, Arranging Machines in a GT Cell,	
	Concurrent Engineering: Bonofits and techniques of Concurrent Engineering. Engineering	
	integration of Life cycle phases in CE, and Colleborative Product Development	
6	Dele of Information Systems & Enterprise Wide Integration in CIM and CIM Modeley	07
0	Kole of Information Systems & Enterprise wide Integration in CIW and CIW Models:	07
	Networks Selection of Network Technology, networks for manufacturing. Communication	
	medium Network Topology, Medium access control Methods, Signaling methods; Network	
	Architectures and Protocols: OSI Model MAP & TOP TCP/IP Network Interconnection and	
	Davidas Network Performance Framework for Enterprise wide Integration CIM Models	
	CIM database and database management systems	
	Manufacturing Data: Types sources Database models Architecture Database Management	
	System (DBMS) Product Data Management (PDM) Advantages of PDM	
	System (DDMS), Froduct Data Management (FDM), Advantages of FDM.	

#### List of Experiments / Tutorials:

- 1. Case study presentation /Actual Visits/Presentation on below topic- Operation, Control and Programming of various computer controlled machines in the FMS such as CNC machine tools, Automated Storage/Retrieval (AS/RS) systems, Robots, automated assembly station, etc.
- 2. Simulation and performance analysis of the FMS, parts flow control on Assembly station.
- 3. Study experiments on Integration aspects in computer integrated manufacturing environment.
- 4. Importance of Artificial Intelligence.

#### **Books Recommended:**

Reference Books:

- 1. Groover, M.P: "Automation, Production System and CIM"- Prentice Hall of India.
- 2. Vajpayee, "Principles of CIM" Prentice-Hall of India.
- 3. Ranky, Paul G: "Computer Integrated Manufacturing"- Prentice-Hall of India.
- 4. Nanua Singh, "Systems Approach to Computer Integrated Design and manufacturing" John Wiley.
- 5. Geoffrey Boothroyd, "Assembly Automation and Product Design", (Manufacturing Engineering and Materials Processing).
- 6. Radhakrishnan.P, Subramanyan. S, "CAD/CAM/CIM", New Age International Publishers.

				25			15			10	25			

#### Pre-requisite: Knowledge of

- 1. Basic statistics.
- 2. Knowledge of sample size, measurements and related terminology.

#### **Objectives:**

- 1. To study fundamentals of statistical techniques.
- 2. To acquaint with various quality management tools.
- 3. To overcome obstacles for achieving a successful quality management.
- 4. To enable and understand Total Quality Management (TQM).

- 1. Demonstrate the understanding of modern quality concepts.
- 2. Demonstrate the understanding of statistical quality control charts.
- 3. Apply standard sampling plans.
- 4. Analyse modern management trends in quality improvement.
- 5. Apply concepts of TQM.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Quality Dimensions of Products and Services	07
	Definition & Evolution of Quality, Quality Assurance, and Quality Characteristics (dimensions).	
	Quality Control, Quality tasks & means to control them, Quality costs concept & its categories,	
	Cost reduction program and economics of quality.	
2	Statistical Quality Control	07
	Basic Concept of Statistical Quality Control (SQC), Statistical Tools in Quality Control. Concept	
	& causes of variation, statistical aspect of control charting. Concept of rational sub-grouping and	
	detecting patterns on the control charts, for variables and attributes: X and R, p, np, c and u charts;	
	specification and tolerances, natural tolerance limits, specification limits, process capability ratio	
	analysis and studies.	
	Concept of Acceptance Sampling, Lot by lot sampling process, types.	
3	Total Quality Management	07
	Basic concepts of TQM, historical review, leadership, concepts, role of senior management,	
	quality statements, plans for process parameters, Implementation of TQM, ISO 9000 quality	
	system, Jurans Triology, Deming's Approach to TQM, Zero defect Concept.	
4	Total Productive Maintenance	07
	History and Impact of TPM, Overall Equipment Effectiveness (OEE). Developing the TPM	
	implementation Plan, Preventive Maintenance, techniques- FMEA, POKAYOKE and Future of	
	TPM.	
5	Six Sigma and Modern Quality Management Tools	07
	Evolution of six-sigma quality approach, steps involved in the application of six sigma, six sigma	
	and Indian Industries. Concept of process capability, Basic & Modern tools in quality	
	improvement, Benchmarking, KAIZEN, JIT, 5-S, Taguchi quality loss function. Introduction to	
	DOE and RSM.	
6	Case Studies	07
	Few case studies to understand how companies in various industries successfully implemented QE	
	into their systems and optimized it.	

#### List of Experiments / Tutorials:

- 1. Using live data from separate case studies, complete analysis of minimum three topics. Every student is expected to do individual and different three case studies.
- 2. Use of modern software for complete analysis of data from experimentation or a Field/online survey questionnaire. One full report may be submitted mentioning all its objectives, methodologies, inferences etc.
- 3. Assignments based on each module

#### **Books Recommended:**

Reference Books:

- 1. Statistical Quality Control By M. Mahajan.
- 2. Grant, Eugene. L., "Statistical Quality Control", McGraw-Hill, 1996.
- 3. Ross, P. Taguchi, "Techniques for Quality Engineering", 2nd edition, McGrawHill, 1966.
- 4. Douglas. C. Montgomery, "Introduction to Statistical quality control", John Wiley, 4th Edition 2001.

				25			15		-	10	25	

#### Pre-requisite: Knowledge of

- 1. Machine design fundamentals.
- 2. Elements of manufacturing engineering.
- 3. Exposure to computer aided design approach.

#### **Objectives:**

- 1. Acquire a deep understanding & assimilate key concepts pertaining to new product design & development process.
- 2. Get familiarised with product design & development approach & methodologies based on modern engineering practises, tools and processes.
- 3. To stimulate creative & inventive solutions to problems.
- 4. Enable the learner to cope up with the product design challenges posed by the ongoing global competitive scenario.

- 1. Understand the generic product design & development process, tools and methodologies.
- 2. Get familiarised with product life cycle & product life cycle assessment.
- 3. Get familiarised with various software solutions and choose appropriate design approaches.
- 4. Understand product costing approach and economic feasibility of the product.
- 5. Get conversant with I.P rights & patenting procedure.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction:	07
	Definition of product design, classification of products and product mix, product architecture.	
	Various considerations for design. Generic steps involved in modern design and development	
	process. Generation of concepts and embodiment of concept. Morphology of design, Design	
	optimization.	
2	Development Process:	07
	Product life cycle & its implications, identifying customer needs, Kano Model, Bench marking	
	techniques & establishing engineering specifications, creativity techniques, simulation, Rapid	
	Prototyping techniques, Axiomatic design, Pugh concept selection approach, Weighted design	
	matrix.	
3	Design Process:	07
	Design for manufacturing & assembly (DFMA), Design for Reliability & Maintainability, Green	
	Design, Sustainable design, Nano design, Sequential and Concurrent design, Reverse engineering	
	techniques, Robust Design & Taguchi's DOE, Legal, Social & Ethical issues related to Design.	
4	Ergonomics & Aesthetics:	07
	Concepts of human engineering, Psychological & Physiological Considerations, Anthropometry,	
	Workplace, Man- Machine interaction, Comfort Criteria, Environmental Conditions including	
	temperature, illusion, noise, vibrations, control panels and displays.	
	Visual communication skills related to products & services, Concepts of size, shape & texture,	
	Generation of product forms, analogies from nature, colours and colour wheel, psychological	
	implications & interaction of colours.	
5	Product Costing:	07
	Product costing elements and methodology of product costing. Economic analysis - qualitative	
	and quantitative, Techno commercial viability, case studies on product costing.	
	Value engineering/value analysis - methodology, value engineering job plan, value engineering	
	check list, case studies on value engineering.	
6	Software solutions & IP Rights:	07
	Drafting Modeling, CAD/CAE tools, CAM interface, CAPP, various softwares employed and their	
	capabilities.	
	Patents & IP Acts – overview & disclosure preparation.	

#### List of Experiments / Tutorials:

The lab sessions/tutorials will focus on the following topics:

- 1. Conduct comprehensive market research using quantitative and qualitative methods.
- 2. Employ advanced ideation methods to generate and critically evaluate innovative product concepts.
- 3. Develop a prototype and iterate the design based on peer feedback and usability.
- 4. Present a detailed sustainability impact assessment focusing on sustainability principles (e.g., lifecycle analysis, eco-friendly materials).
- 5. Perform an in-depth cost-benefit analysis of a proposed product, including market size estimation, pricing strategies, and potential return on investment.
- 6. Study on the various regulatory compliance and standards, types of compliance testing.

#### **Books Recommended:**

Reference Books:

- 1. Karl T. Ulrich, Steven D. Eppinger, "Product Design & Development", Tata McGrawhill New Delhi, 2003.

#### **Objectives:**

- 1. To study the working principles of various smart materials.
- 2. To identify applicability of various smart materials as actuator and sensor.
- 3. To study advances in smart materials.

- 1. Understand working of smart materials and their application as actuator and sensor.
- 2. Select an appropriate smart material for a given application.
- 3. Identify applicability of smart materials for new prospective smart structures.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction to Smart Materials:	07
	Overview of the different types of Smart Materials, Smart materials used in structures, smart	
	material for sensors, actuators controls, memory and energy storage and their inter-relationships,	
	concept of High Bandwidth- Low Strain generating materials (HBLS), and Low Bandwidth High	
	Strain Generating Materials (LBHS).	
2	Overview of the following materials with focus on synthesis, constitutive/governing relationships,	07
	strengths and weaknesses, and applications (both sensing and actuation, etc.):	
	a. Peizoelectric Materials.	
	b. Magnetostrictive Materials.	
	c. Shape Memory Alloys.	
	d. Electroactive Polymers.	
3	Overview of the following materials with focus on synthesis, strengths and weaknesses, and	07
	applications:	
	a. Ferrofluids and Magneto rheological Fluids and applications in dampers.	
	b. Soft Matter and its applications as smart skins, smart textiles, etc.	
	c. Carbon Nanotubes and Carbon nano-structures and its applications.	
	d. Thermoelectric Materials and Peltier devices.	
4	Smart Materials for Energy Applications:	07
	Materials used for energy storage, Hydrogen storage materials, Energy harvesting and Energy	
	scavenging from vibrations.	
5	Composite Materials:	07
	Introduction to Composite Materials, Nano Composite Materials, Soft conducting and magnetic	
	solids, active fiber composites and Smart polymer matrix composites.	
6	Simulation of Smart Materials:	07
	Case studies on simulation of smart materials.	

#### List of Experiments / Tutorials:

- 1. Assignments based on syllabus.
- 2. Case study or literature based presentation/seminar.
- 3. Mathematical modelling and simulation of smart and new materials based systems and devices.

#### **Books Recommended:**

Reference Books:

- 1. Shape Memory Alloys, D.C. Lagoudas, Springer Science, 2008.
- 2. Self-healing Materials: Fundamentals, Design Strategies and Applications, S.K. Ghosh, Wiley-VCH Verlag GmbH and Co., 2009.
- 3. Energy Harvesting Technologies, S Priya and D J Inman, Springer-Verlag, 2008.
- 4. Optical Materials and Applications, Moriaki Wakaki, CRC Press, 2012.
- 5. Polymer Nano-composites and their Applications, S.S. Ray, M Bousmina, American Scientific Publishers, 2018.
- 6. Smart Materials and Structures, M.V. Gandhi and B.S. Thompson, Chapman & Hall, London, New York, 1992.
- 7. Encyclopedia of Smart Materials Vol. I and II, Mel Scwartz, John Wiley & Sons, 2002.
- 8. Smart Structures: Analysis and Design, A.V. Srinivasan, Cambridge University Press, Cambridge, New York, 2001.
- 9. Piezoelectric Sensorics: Force, Strain, Pressure, Acceleration and Acoustic Emission Sensors, Materials and Amplifiers, G. Gautschi, Springer, Berlin, New York, 2002.
- 10. Piezoelectric Actuators and Ultrasonic Motors, K. Uchino, Kluwer Academic Publishers, Boston, 1997.
- 11. Handbook of Giant Magnetostrictive Materials, G. Engdahl, Academic Press, San Diego, Calif., London, 2000.
- 12. Shape Memory Materials, K. Otsuka and C.M. Wayman, Cambridge University Press, Cambridge, New York, 1998.
- 13. Fiber Optic Sensors: An Introduction for Engineers and Scientists, Eric Udd, John Wiley & Sons, New York, 1991.
- 14. Electroactive Polymers for Robotic Applications: Artificial Muscles and Sensors, Kwang J KIm and Satoshi Tadokore, Springer-Verlag, London, 2007.

#### Pre-requisite: Knowledge of

- 1. Production Management.
- 2. Industrial Engineering.
- 3. Quality Assurance.

#### **Objectives:**

- 1. Help the learner understand and assimilate deeper insights into the opportunities & challenges faced by manufacturing as a domain today.
- 2. Prepare the learner to face the demands and complexities of a global market place.

- 1. Understand the relevance and basics of World Class Manufacturing.
- 2. Design and develop a roadmap for world class manufacturing.
- 3. Meet the challenges that the Indian manufacturer's faces, as it evolves from a domestic to a world class global manufacturer status.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Historical Perspective:	06
	World class manufacturing organizations, Models for manufacturing excellence: Schonberger,	
	Halls, Gunn and Maskell models, Business Excellence.	
	Globalization and International Business; Global Competitiveness and Manufacturing Excellence,	
	Manufacturing and Information age competition; Manufacturing challenges and Problems in	
	Manufacturing Industries.	
2	System and Tools for World Class Manufacturing:	07
	Improving Product & Process Design – Lean Production – SQC, FMS, Rapid Prototyping, Poka	
	Yoke, 5-S, 3 M, JIT, Product Mix, Optimization, Procurement & stores practices. Total Productive	
	maintenance, Visual Control.	
3	Benchmark, Bottlenecks and Best Practices:	07
	Concepts of benchmarking, Bottleneck and best practices, Best performers Gaining competitive	
	edge through world class manufacturing Value added manufacturing, Value Stream mapping,	
	Eliminating waste, Toyota Production System, Example.	
4	HR Dimensions in WCM – WCM Strategy Formulation:	07
	Adding value to the organization, Organizational learning – techniques of removing Root cause of	
	problems – People as problem solvers, New organizational structures.	
	Associates, Facilitators - Teamsmanship, Motivation and reward in the age of continuous	
	improvement.	
5	Typical Characteristics of WCM Companies:	07
	Performance indicators like POP, TOPP and AMBITE systems- what is world class Performance	
	–Six Sigma philosophy.	
6	Competitive Indian Manufacturing:	08
	Manufacturing Performance and competitiveness of Indian Firms, Manufacturing objectives and	
	Strategy, Usage of Management Tools and Technologies. Manufacturing Management Practices,	
	IT Infrastructure and Practices, Strategic Intent Framework, Breadth and Integration of IT	
	Infrastructure, The Future WCM.	
	Manufacturing strategy: Futile search for an Elusive Link, Manufacturing Strategic Intent	
	classification translating into action.	
	WCM - the Indian Scenario:	
	Case studies on leading Indian companies moving towards world class manufacturing - Task	
	Ahead.	
	Green Manufacturing, Clean manufacturing, Agile manufacturing.	

#### **List of Experiments / Tutorials:**

- 1. Using data from separate case studies, complete analysis of minimum three topics. Every student is expected to do individual and different three case studies.
- 2. Use of modern software for complete analysis of data from experimentation or a Field / online survey questionnaire. One full report may be submitted mentioning all its objectives, methodologies, inferences etc.
- 3. Assignments based on each module.

#### **Books Recommended:**

Text books:

- 1. Sahay B. S., Saxena KBC and Ashish Kumar, "World Class Manufacturing Strategic Perspective Mac Milan Publications", New Delhi.
- 2. Korgaonkar M. G., "Just In Time Manufacturing", MacMilan Publications.
- 3. Narayanan V. K., "Managing Technology and Innovation for Competitive Advantage", Prentice Hall, 2000.

#### Reference Books:

- 1. Adam and Ebert, "Production and Operational Management", 5th Edition, Prentice Hall learning Pvt. Ltd., New Delhi.
- 2. Ron Moore, "Making Common Sense Common Practice Models for manufacturing Excellence", Butterworth-Heinemann, 2002.
- 3. Jeffrey K. Liker "The Toyota Way 14 Management Principles", Mc-Graw Hill, 2003.

				25			15		10 25				

#### Pre-requisite: Knowledge of

- 1. Mathematical statistics.
- 2. Basic production process.

#### **Objectives:**

- 1. To provide insight into fundamental principles and methodologies related to planning, design, operation, and control of manufacturing systems.
- 2. To impart analytical abilities to formulate and solve problems faced by modern Manufacturing systems and implement the cost-effective solutions.

- 1. Analyse various aspects of good manufacturing planning and control framework.
- 2. Design demand management scheme using demand forecasting methods and prepare aggregate plan.
- 3. Develop the plan for scheduling and sequencing of manufacturing operations.
- 4. Create a logical approach to Line balancing in various production systems.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Basic Concepts of Manufacturing Planning and Control (MPC): Overview of manufacturing	06
	systems and changing manufacturing environment. MPC system, its framework.	
	Demand Management: Demand Management in MPC environment. Need for Forecasting the	
	demand in MPC, forecasting methods of qualitative type, quantitative type. Time series analysis:	
	least square method, moving average method, exponential smoothing method. Causal method:	
	regression Analysis. Forecasting Errors and Forecasting Bias.	
2	Aggregate Planning: Concept of aggregate planning, decision rules, strategies and methods.	08
	Capacity Planning: Measures of capacity, Factors influencing effective capacity planning, short	
	range, medium range and long-range capacity planning, Rough cut capacity planning.	
	Master Production Scheduling: MPS activity, Techniques.	
3	<b>Inventory Control:</b> Basic concepts of inventory, Types of inventory – Q system and p system,	07
	Economic Order Quantity, Inventory Models – Deterministic and Probabilistic. Other inventory	
	control techniques – ABC Analysis, HML VED etc. techniques.	
	Operational Planning - MRP, MRP II, JIT: Material Requirement planning (MRP) and	
	Manufacturing Resource Planning (MRP-II) - general concepts, types of demands, Inputs to MRP,	
	MRP objectives, outputs of MRP, Estimation of planned order releases. Benefits and Limitations	
	of MRP II, Concept of JIT.	
4	Production Scheduling and Sequencing: Inputs for scheduling, factors affecting scheduling, use	07
	of Gantt Charts. Sequencing of m jobs on one, two, three and m machines. Two jobs on m	
	machines.	
	Resource Scheduling: Resource smoothing, Resource levelling.	
5	Process Planning: Need, pre-requisites and steps in process planning.	06
	Line balancing: Objectives and constraints in assembly line, heuristic methods for line balancing.	
	Enterprise Resource Planning (ERP): Evolution, features, purpose of modeling an enterprise,	
	information mapping, generic model of ERP, Modules in ERP, Methodology of implementation,	
	critical success factors of ERP, Case studies of success and failure of ERP implementations, ERP	
	packages.	
6	Quantitative Techniques in MPC: Linear Programming Problems, Assignment, Transportation	08
	and Transshipment Models.	

#### **List of Experiments / Tutorials:**

- 1. Using data from separate case studies, complete analysis of minimum three topics. Every student is expected to do individual and different three case studies.
- 2. Use of modern software for complete analysis of data from experimentation or a Field / online survey questionnaire. One full report may be submitted mentioning all its objectives, methodologies, inferences etc.
- 3. Assignments based on each module.

#### **Books Recommended:**

Text books:

- 1. Thomas E. Vollmann, William L. Berry, D. Clay Whybark (2004), Manufacturing Planning and Control Systems for Supply Chain Management, Mcgraw-hill Companies.
- 2. Stephen N. Chapman (2005), Fundamentals of Production Planning and Control, Prentice hall, 2006.

#### Reference Books:

#### Pre-requisite: Knowledge of

1. Probability theory and distribution curves.

#### **Objectives:**

- 1. To familiarize learners with theory and laws of probability.
- 2. To acquaint learners with reliability and its concepts.
- 3. To acquaint learners with various methods to evaluate the system reliability of simple and complex systems.
- 4. To familiarise learners with the various aspects of Maintainability, Availability and FMEA.

- 1. Understand and apply the theory and laws of Probability to solve engineering problems.
- 2. Apply various reliability concepts to calculate different reliability parameters.
- 3. Estimate the system reliability of simple and complex systems and improve the reliability of system with various techniques.
- 4. Apply the Reliability concepts in Maintenance of device/equipment.
- 5. Apply a Failure Mode Effect and Criticality method to carry out Reliability analysis.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Reliability Mathematics:	05
	Probability Concepts: Standard definitions and concepts; Conditional Probability, Baye's	
	Theorem.	
	Probability Distributions: Binomial, Normal, Poisson, Weibull, Exponential, relations between	
	them and their significance.	
	Measures of central tendency and Dispersion: Mean, Median, Mode, Range, Mean Deviation,	
	Standard Deviation, Variance, Skewness and Kurtosis.	
2	Reliability Concepts: Reliability definitions, Importance of Reliability, Quality Assurance and	07
	Reliability, Bath Tub Curve.	
	Failure Data Analysis: Hazard rate, failure density, Failure Rate, Mean Time To Failure (MTTF),	
	MTBF, Reliability Functions.	
	Reliability Hazard Models: Constant Failure Rate, Linearly increasing, Time Dependent Failure	
	Rate, Weibull Model. Distribution functions and reliability analysis.	
3	System Reliability: System Configurations: Series, parallel, mixed configuration, k out of n	07
	structure, Complex systems.	
	Reliability Improvement: Redundancy Techniques: Element redundancy, Unit redundancy,	
	Standby redundancies. Markov analysis.	
	System Reliability Analysis – Enumeration method, Cut-set and Tie-set method, Success Path	
	method, Decomposition method.	
4	Failure Mode, Effects and Criticality Analysis:	07
	Failure mode effects analysis (FMEA), severity/criticality analysis, FMECA examples, Fault tree	
	construction, basic symbols, development of functional reliability block diagram, Fault tree	
	analysis (FTA) and Event tree Analysis (ETA).	
5	Reliability Testing: Types of testing: Life testing, Accelerated testing, Sequential testing,	09
	Success failure testing.	
	Maintainability and Availability: System downtime, Design for Maintainability: Maintenance	
	requirements, Design methods: Fault Isolation and self-diagnostics, Parts standardization and	
	Interchangeability, Modularization and Accessibility, Repair vs. Replacement, Availability –	
	qualitative aspects.	
6	Case studies based on following topics:	07
	Nuclear Power plants, Marine power plant, Computer system and General complex system.	

#### List of Experiments / Tutorials:

- 1. Reliability data collection, sorting, classification, Pareto analysis/ bar chart plotting (paper clips experiments). Plotting reliability characteristics for a given data set.
- 2. Select best-fit probability distributions for reliability modelling using a suitable approach (Use data from paper clips experiments).
- 3. Case studies on reliability block diagrams, fault tree analysis, FMEA analysis using MIL-STD-1629, Markov chains/ Monte Carlo simulation, reliability allocation (ARINC/ AGREE/ Feasibility of objectives/ Aggarwal's method/ and Integrated factor).
- 4. Physics of failure models/ Warranty data analysis.
- 5. Handbook based reliability predictions FIDES, 217+, Bellcore/ Telcordia SR-332, ANSI/ VITA51.1, NSWC-11, or GJB/z 299 (any one).
- 6. Analyse life testing data for the following cases:
  - Life testing with censoring
  - Life testing with replacement

#### **Books Recommended:**

Text books:

- 1. L. S. Srinath, "Reliability Engineering", Affiliated East-West Press (P) Ltd., 1985.

#### Pre-requisite: Knowledge of

- 1. Conventional machining processes.
- 2. Non-conventional machining processes.

#### **Objectives:**

- 1. To give awareness of different techniques used in micro and nano manufacturing.
- 2. To give in-depth idea of the conventional techniques used in micro manufacturing.
- 3. To introduce Non-conventional micro-nano manufacturing and finishing approaches.
- 4. To introduce Micro and Nanofabrication Techniques and other processing routes in Micro and nano manufacturing.
- 5. To know different techniques used in Micro Joining and the metrology tools in micro and nano manufacturing.

- 1. Get an awareness of different techniques used in micro and nano manufacturing.
- 2. Get in-depth idea of the conventional techniques used in micro manufacturing.
- 3. Become aware about non-conventional micro-nano manufacturing and finishing approaches.
- 4. Get awareness on micro and nano finishing processes.
- 5. Understand micro and nanofabrication techniques and other processing routes in micro and nano manufacturing.
- 6. Know about different techniques used in micro joining and the metrology tools in micro and nano manufacturing.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction to Precision engineering:	06
	Macro milling and micro drilling, Micro-electromechanical systems - merits and applications,	
	Micro phenomenon in Electro-photography – applications. Introduction to Precision engineering,	
	macro milling and micro drilling, Micro-electromechanical systems - merits and applications,	
	Micro phenomenon in Electro-photography – applications, Introduction to Bulk micromachining,	
	Surface micromachining- steps, Micro instrumentation - applications, Micro Mechatronics,	
	Nanofinishing – finishing operations. Laser technology in micro manufacturing- Practical Lasers,	
	application of technology fundamentals. Introduction to Micro-energy and chemical system	
	(MECS), Space Micro-propulsion, e-Beam Nanolithography – important techniques, Introduction	
	to Nanotechnology, Carbon Nano-tubes - properties and structures, Molecular Logic Gates and	
	Nano level Biosensors – applications.	
2	Introduction to mechanical micromachining:	06
	Micro drilling – process, tools and applications. Micro turning- process, tools and applications,	
	Diamond Micro turning - process, tools and applications. Micro milling and Micro grinding -	
	process, tools and applications. Micro extrusion- process and applications. micro bending with	
	Laser. Nano- Plastic forming and Roller Imprinting.	
3	Introduction to Non-conventional micro-nano manufacturing:	07
	Process, principle and applications - Abrasive Jet Micro Machining, WAJMM. Micro EDM,	
	Micro WEDM, Micro EBM – Process principle, description and applications. Micro ECM, Micro	
	LBM - Process principle, description and applications. Focused ion beams - Principle and	
	applications.	
4	Introduction to Micro and Nano Finishing Processes:	08
	Magnetorheological Finishing (MRF) processes, Magnetorheological abrasive flow finishing	
	processes (MRAFF) - process principle and applications. Force analysis of MRAFF process,	
	Magnetorheological Jet finishing processes. Working principle and polishing performance of MR	
	Jet Machine.Elastic Emission Machining (EEM) – machine description, applications. Ion Beam	
	Machining (IBM) – principle, mechanism of material removal, applications. Chemical Mechanical	
	Polishing (CMP) – Schematic diagram, principle and applications.	
5	Introduction to Micro Fabrication: Basics, flowchart, basic chip making processes.	08
	Introduction to Nanofabrication: Nanofabrication using soft lithography – principle,	
	applications - Examples (Field Effect Transistor, Elastic Stamp) Manipulative techniques -	
	process principle, applications. Introduction to Carbon nano materials - CN Tubes CN Tubes -	
	properties and applications CN Tube Transistors – Description only Diamond - Properties and	
	applications, CVD Diamond Technology LIGA Process.	
6	Laser Micro welding:	07
	Laser Micro welding – description and applications, Defects Electron Beam Micro-welding –	
	description and applications Introduction to micro and nano measurement, defining the scale,	
	Uncertainty Scanning Electron Microscopy – description, principle Scanning White-light	
	Interferometry – Principle and application Optical Microscopy – description, application Scanning	
	Probe Microscopy, scanning tunneling microscopy description, application Confocal Microscopy	
	- description, application Introduction to On-Machine Metrology.	

#### List of Experiments / Tutorials:

- 1. Assignments based on syllabus.
- 2. Case study or literature based presentation/seminar.
- 3. Mathematical modelling/software based simulation of various fabrication systems/processes.

#### Pre-requisite: Knowledge of

1. Domain knowledge of any Program Specific Outcome (PSO) of the curriculum.

#### **Objectives:**

- 1. Project Implementation with reference to the subjects in the various domains of UG & PG curriculum, with a view to strengthen research.
- 2. To explore and identify real-world social and industrial problems, to realize feasible solutions with added business value, based on conventional or innovative methods/practices.

**Outcomes:** On completion of the course, learner will be able to:

- 1. Identify problem statement, design and develop project in predefined timeline.
- 2. Provide problem solutions by learning/exploring various ideas from multi-disciplinary domains across different disciplines.
- 3. Draw proper inferences through theoretical/ simulations/ experimental and analyze the impact of the proposed method towards design and development of the product.
- 4. Develop and enhance skills associated with literature survey, hardware and software co-integrations, documentation, development and testing leading to innovative product or a paper publication in a reputed journal.

#### Syllabus:

Domain knowledge (any field of knowledge and beyond) needed from the various areas of UG & PG curriculum for the effective interaction of the product. These areas can be updated (expanded), based on the needs of technological innovations and development needed for a specific project.

#### **Evaluation Scheme:**

Every student performance will be reviewed once in a semester by review panel formed by the Head of Department. The evaluation is based on the following criteria:

- 1. Innovative ideas and Motivation
- 2. Objectives, Expected outcome and long-term social impact
- 3. Literature survey and Comparative Methodology
- 4. Timeline, progress and execution (Project Implementation)
- 5. Documentation/ synopsis of project report.
- 6. Overall presentation

Marks scored in the mid-semester review will be considered as a part of the term work.

The final certification and acceptance of Term work ensures satisfactory performance and the outcome of evaluation centered about evaluation scheme.

#### Pre-requisite: Knowledge of

- 1. Fundamentals of probability.
- 2. Applied Mathematics.

#### **Objectives:**

1. To build the strong foundation in statistics which can be applied to analyze data and make predictions.

- 1. Interpret data using descriptive statistics.
- 2. Demonstrate sampling distributions and estimate statistical parameters.
- 3. Develop hypothesis based on data and perform testing using various statistical techniques.
- 4. Perform analysis of variance on data.
- 5. Examine relations between data.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	<b>Description</b> <b>Introduction to Statistics:</b> Types of statistics, population vs sample Measures of Central Tendency: arithmetic mean, properties, weighted mean, properties, median, mode, grouped and ungrouped data, empirical relation between the mean, median and mode, geometric mean, harmonic mean, relation between arithmetic, geometric and harmonic mean, outlier. Measures of dispersion: range, quartile deviation, mean deviation, standard deviation, properties, variance, root mean square deviation, empirical relations between measures of dispersion, absolute and relative dispersion, coefficient of variation, moments, Pearson's $\beta$ and $\gamma$ coefficients, skewness, kurtosis, population parameters and sample statistics, histogram, frequency polygon Measures of position: quartiles, interquartile range, semi interquartile range, percentiles, percentile rank, 10–90 percentile range, box and whisker plot.	07
2	<ul> <li>Sampling distribution and Estimation:</li> <li>Sampling distribution: Central limit theorem, population distribution, chi-square distribution, Z - distribution, student's t-distribution, F-Distribution.</li> <li>Statistical Estimation: Characteristics of estimators, consistency, unbiasedness, unbiased estimates, efficient estimates, sufficient estimators, point estimates, interval estimates, determination of sample size for estimating mean and proportions, estimates of population parameters, probable error.</li> </ul>	07
3	<b>Hypothesis Testing for data driven decision making:</b> Hypothesis testing: Test of significance, null and alternative hypothesis, type I and type II error, factors affecting Type II error, probability of Type II error, power of test, p-Value, critical region, level of significance. Confidence interval: Population mean, difference between two population means, population proportion, difference between two population proportions, variance, ratio of variances of two populations Goodness of fit test using Kolmogorov Smirnov test and Anderson Darling test. Tests using z-statistics: difference between sample proportion and population mean with known $\sigma$ and unknown $\sigma$ , difference between two sample means, one tailed and two tailed tests Test using t-statistics: difference between sample mean and population mean, difference between two independent sample means, difference between means from the same group; Test using F-statistics: equality of population variance Test using chi-square statistics: test of independence, goodness of fit.	12
4	Analysis of Variance (ANOVA) for data analysis: Sample size calculation, one way ANOVA, POST-HOC Analysis (Tukey's Test), randomized block design, two-way ANOVA.	08
5	<b>Examining Relationship:</b> Correlation: Scatter plot, covariance, Karl Pearson's coefficient of correlation, hypothesis test for correlation, correlation vs causation, extreme data values, limits of correlation coefficient, Rank correlation, Spearman's rank correlation coefficient, Repeated ranks, partial and multi correlation. Regression: linear regression analysis, lines of regression, regression coefficients, scatter plot with regression lines, hypothesis test for regression, multiple regression, coefficient of determination, residuals, collinearity, influential observations.	08

#### **Objectives:**

- 1. To understand, define and differentiate different types of intellectual properties (IPs).
- 2. Assessing different IP management (IPM) approaches.
- 3. Exposure to the Legal management of IP and understanding of real-life practice of IPM.

- 1. Recognize the crucial role of IP for the purposes of product and technology development.
- 2. Understand how and when to file a patent.
- 3. Apply the knowledge to understand the entire ecosystem.
- 4. Derive value from IP and leverage its value in new product and service development.

Detail	ed Syllabus: (unit wise)				
Unit	Description	Duration			
1	Intellectual Property Law:				
	Introduction and the need for intellectual property right (IPR), Intellectual Property laws, IPR in				
	India: Genesis and development, Major International Instruments concerning Intellectual Property				
	Rights: Paris Convention, the Berne Convention, the Universal Copyright Convention, the WIPO				
	Convention, the Patent Cooperation Treaty, the TRIPS Agreement, Types of IPR.				
2	Patents and Trademarks:	09			
	Elements of Patentability: Novelty, Non-Obviousness, Industrial Application, Non-Patentable				
	Subject Matter, Registration Procedure, Rights and Duties of Patentee, Assignment and licence,				
	Restoration of lapsed Patents, Surrender and Revocation of Patents, Infringement, Remedies &				
	Penalties, Patent office and Appellate Board, Case study of existing patents related to software,				
	nealthcare, devices.				
	marke cortification marke and service marke). Non Pagistrable Trademarke, Pagistration of				
	Trademarks, Rights of holder and assignment and licensing of marks. Infringement Remedies &				
	Penalties Trademarks registry and appellate hoard				
3	Convrights and Design.	09			
5	Copyrights and Design. Copyrights: Nature, Subject matter: original literary, dramatic, musical, artistic works,	07			
	cinematograph films and sound recordings. Registration Procedure. Term of protection.				
	Ownership of copyright, Assignment and licence of copyright, Infringement, Remedies &				
	Penalties, Related Rights, distinction between related rights and copyrights.				
	Design: meaning and concept of novel and original, procedure for registration, effect of				
	registration and term of protection.				
4	Patenting:	08			
	Introduction to the Indian Patent System, Patent Law as Concepts, IPR as a group of rights, Patent				
	Rights, Fundamental of Patents, Patent Law in India, Understanding the Patents Act and the Rules.				
5	Patent Drafting and Searching:	06			
	Anatomy of a patent application				
	Adequate disclosure				
	• The art of drafting patent claims				
	• Patent searching:				
	Purposes and techniques				
	Available On-line tools				
6	Actions for patent infringement:	05			
	Interpretation of claims				
	Doctrine of equivalents				
	• Product testing as a possibly infringing use				
	Doctrine of exhaustion				
	Legal and equitable remedies for infringement				
#### **Books Recommended:**

### Pre-requisite: Knowledge of

- 1. Computer Network.
- 2. Information Security.

### **Objectives:**

- 1. To understand and identify distinct types of cybercrime and cyber offences.
- 2. To recognized Indian IT Act 2008 and its latest amendments.
- 3. To learn several types of security standards compliances.

- 1. Understand the distinct types of cybercrime and security issues E Business.
- 2. Analyses distinct types of cyber threats and techniques for security management.
- 3. Explore the legal requirements and standards for cyber security in various countries to regulate cyberspace.
- 4. Impart the knowledge of Information Technology Act and legal framework of right to privacy, data security and data protection.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction to Cybercrime: Cyber Crime, Cyber Law, Cyber Security, History of Cyber Crime,	12
	Hacking, Data Theft, Cyber Terrorism ,Virus & Worm's ,Email Bombing ,Pornography, online	
	gambling ,Forgery ,Web Defacements, Web Jacking, Illegal online Selling, Cyber Defamation,	
	Software Piracy, Electronics/ Digital Signature, Phishing ,Password Cracking, Key loggers and	
	Spywares, Steganography, DoS and DDoS attacks, SQL Injection, Buffer Over Flow ,Attacks on	
	Wireless Networks , Phishing Identity Theft (ID Theft).	
	<b>Cyber offenses:</b> How criminal plan the attacks, Social Engg, Cyber stalking, Cybercafe and Cybercrimes, Botnets, Attack vector.	
2	Cyber Threats Analysis: Knowledge of Dynamic and Deliberate Targeting, Knowledge of	08
	Indications and Warning. Knowledge of Internal Tactics to Anticipate and/or,Emulate Threat	
	Capabilities and Actions. Knowledge of Key Cyber Threat Actors and their Equitie, Knowledge	
	of Specific Target. Identifiers and Their Usage.	
	Cyber Security Management: Knowledge of Emerging Security Issues, Risks, and	
	Vulnerabilities.	
3	Electronic Business and legal issues:	06
	Evolution and development in Ecommerce, Policy Frameworks for Secure Electronic Business,	
	paper vs paper less contracts, E-Commerce models- B2B, B2C, E security. E-Payment	
	Mechanism; Payment through card system, E-Cheque, E-Cash, E-Payment Threats & Protections,	
	Security for E-Commerce.	
4	Indian IT Act: Cyber Crime and Criminal Justice, Penalties, Adjudication and Appeals Under the	08
	IT Act, 2000, IT Act. 2008 and its Amendments.	
	Security aspect in cyber-Law: The Contract Aspects in Cyber Law, The Security Aspect of	
	Cyber Law, The Intellectual Property Aspect in Cyber Law, The Evidence Aspect in Cyber Law,	
	The Criminal Aspect in Cyber Law.	
5	Security Industries Standard Compliances:	08
	IT Security v/s IT Compliance, Cyber Security Standards, critical security controls for cyber	
	security, GRC (Governance, Risk Management, and Compliance). SOX, GLBA, HIPAA, ISO/IEC	
	27001, NIST Cyber Security Framework (CSF), PCI-DSS. OWASP Top Ten Project., GDPR	
	(General Data Protection Regulation), NIST (National Institute of Standards and Technology),	
	CIS Controls (Center for Internet Security Controls).	

### **Books Recommended:**

Reference Books:

### Pre-requisite: Knowledge of

1. Software Engineering.

### **Objectives:**

- 1. To focus on the phases of agile project management.
- 2. To equip the student on the scaling techniques for agile projects.
- 3. To analyze the performance of agile projects.
- 4. To develop the skills of the students on product development.
- 5. To equip the students on agile delivery and risk mitigation.

- 1. Summarize the concepts of agile practices and business objectives.
- 2. Gain knowledge on the phases of agile development framework.
- 3. Have an exposure on the scaling factors and models to be developed for agile projects.
- 4. Acquire knowledge on the agile performance measurement.
- 5. Develop the product based on agile factors with risk mitigation.
- 6. Describe the role of agile in enterprise management and incremental delivery.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction to Agile Frameworks:	05
	Agile definitions and historical context, Agile Values and Principles found in the Agile Manifesto,	
	Misconceptions about Agile.	
	Selecting an Approach that Fits: Choosing between an Agile or Traditional Approach, Selecting	
	the Right Agile Approach.	
2	Agile Methodologies:	07
	The Agile Methodologies: Common Themes, Methodology Descriptions, Extreme Programming,	
	Scrum, Feature Driven Development, The Crystal Methodologies, Adaptive, Software	
	Development, Dynamic Systems Development Method, Lean Software Development, Starting	
	Monday: Investigate Further.	07
3	Extreme Programming (XP):	07
	Understanding XP (Extreme Programming) - XP life cycle, XP team, XP Concepts, Adopting XP-	
	Rhowing whether AP is suitable, implementing AP, assessing Aginty, Practicing AP - Ininking-	
1	Pair Programming, Energized work, informative workspace, Root cause Analysis, Retrospectives.	10
4	Planning Agne r Tojects.	10
	Team Distribution	
	Agile Project Lifecycles Typical Agile Project Lifecycles Activities within each Phase Create	
	product vision. Producing a Minimum Marketable Feature.	
	Release Planning, Creating the Product Backlog, User Stories, Prioritizing and Estimating,	
	Creating the Release Plan.	
	Monitoring and Adapting, Task Boards and Information Radiators, Control Limits, Variance and	
	Trend Analysis, Managing Risks and Issues, Retrospectives.	
5	Agile Estimations and Leading Agile Teams:	07
	Introduction to Agile Estimations, Needs, Stakeholders, Estimation Stages, Estimation Styles and	
	Process. Velocity, Sprint Velocity.	
	Skills needed by Agile Leaders, Emotional Intelligence, Listening Skills, Command and Control	
	vs. Servant Leadership, Adaptive Leadership, Collaboration, Facilitation, Problem Solving and	
	Participatory Decision-Making Skills, Coaching and Mentoring Teams, Conflict Resolution.	
6	Advanced Emerging Techniques and Case Studies:	06
	Learn, value streams and Kanban models, Lean, Crystal, DevOps and continuous deployment	
	strategies, Scaling agile processes, Case study.

### Pre-requisite: Knowledge of

- 1. Applied Statistics.
- 2. Regression and Analysis of Variance.

## **Objectives:**

- 1. To understand the issues and principles of Design of Experiments (DOE).
- 2. To list the guidelines for designing experiments.
- 3. To become familiar with methodologies that can be used in conjunction with experimental designs for robustness and optimization.

- 1. Plan data collection, to turn data into information and to make decisions that lead to appropriate action.
- 2. Apply the methods taught to real life situations.
- 3. Plan, analyze, and interpret the results of experiments.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction:	07
	Strategy of Experimentation, Typical Applications of Experimental Design, Guidelines for	
	Designing Experiments, Response Surface Methodology.	
2	Fitting Regression Models:	07
	Linear Regression Models, Estimation of the Parameters in Linear Regression Models.	
	Hypothesis Testing in Multiple Regression, Confidence Intervals in Multiple Regression,	
	Prediction of new response observation, Regression model diagnostics, Testing for lack of fit.	
3	Two-Level Factorial Designs and Analysis:	07
	The 2 <sup>2</sup> Design, The 2 <sup>3</sup> Design, The General 2 <sup>k</sup> Design, A Single Replicate of the 2 <sup>k</sup> Design, The	
	Addition of Center Points to the 2 <sup>k</sup> Design, Blocking in the 2 <sup>k</sup> Factorial Design, Split Plot Designs.	
4	Two-Level Fractional Factorial Designs and Analysis:	07
	The One-Half Fraction of the 2 <sup>k</sup> Design, The One-Quarter Fraction of the 2 <sup>k</sup> Design, The General	
	2 <sup>k-p</sup> Fractional Factorial Design, Resolution III Designs, Resolution IV and V Designs, Fractional	
	Factorial Split-Plot Designs.	
5	Conducting Tests:	07
	Testing Logistics, Statistical aspects of conducting tests, Characteristics of good and bad data sets,	
	Example experiments, Attribute Vs Variable data sets.	
6	Taguchi Approach:	07
	Crossed Array Designs and Signal-to-Noise Ratios, Analysis Methods, Robust design examples.	

## **Books Recommended:**

### Pre-requisite: Knowledge of

1. Fundamental concepts of Mathematical statistics.

### **Objectives:**

- 1. To formulate a real-world problem as a mathematical programming model.
- 2. To understand the mathematical tools that are needed to solve optimization problems.
- 3. To use mathematical software to solve the proposed models.

- 1. Convert a real-world problem in to a Linear Programming Problem and Interpret the solution obtained using Simplex method or other algorithms.
- 2. Understand reasons of formation of queues, Classify various queuing systems and Apply performance parameters defined for various queuing systems for decision making in real life situations.
- 3. Describe concept of simulation and Apply Monte Carlo Simulation technique to systems such as inventory, queuing and Develop solutions for them.
- 4. Solve the Game and explore the optimal strategies.
- 5. Identify the decision situations which vary with time and Analyze them using principle of dynamic programming to real life situations.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Linear Programming Problem:	09
	Introduction to Operations Research (OR), Decision situations, Decision making process, Concept	
	of Optimization, Mathematical Models.	
	Linear Programming: Linear Programming Problem - Mathematical Formulation, Finding	
	Optimal solution using Graphical method, Simplex method, Big-M method, Two Phase method,	
	Special cases, Principle of Duality.	
2	Special Cases of LPP:	07
	Transportation problem: Formulation - Finding Optimal solution, Degeneracy.	
	Assignment problem: Formulation - Finding Optimal solution.	
	Travelling Salesman Problem.	
3	Dynamic Programming:	08
	Introduction - Bellman's Principle of optimality - Applications of dynamic programming to capital	
	budgeting, inventory, employment smoothening, cargo loading and shortest path problem.	
4	Game Theory:	06
	Introduction - Minimax (Maximin) Criterion and optimal strategy - Solution of games with saddle	
	points – 2 x 2 games - dominance principle - m x 2 & 2 x n games, Iterative Method.	
5	Queuing Model:	06
	Introduction - Poisson arrivals - Exponential service time. Single Channel – Single server - Infinite	
	population and finite population models, Multichannel - Single server - Infinite population models.	
	Constant Service rate - Single Channel – Single server - Infinite population.	
6	Simulation:	06
	Definition - Methodology of simulation - Monte Carlo Simulation Technique - applications to	
	Inventory and Queuing problems – Advantages and Limitations of Simulation.	
	Simulation Languages.

### Pre-requisite: Knowledge of

- 1. Manufacturing systems.
- 2. Mechanical measurements and control.
- 3. Industrial electronics.

### **Objectives:**

- 1. To acquaint with basic concepts of industrial automation involving pneumatic and hydraulic controls.
- 2. To familiarize with the elements of electro-pneumatic interface with control systems.
- 3. To learn about programmable logic controller.
- 4. To know the role of robotics in Automation.

- 1. Students shall be able to understand the working of automation systems and shall acquire the insight to build the automation systems.
- 2. Illustrates the use of PLC in Automation.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	<b>Introduction to Automation:</b> Need of Automation, Automation Principles and Strategies, Elements of Automated system, Levels of Automation, Automation in manufacturing system, Advanced automation function, Arguments for and against automation (with case studies).	03
2	Hardware components for Automation: Sensors- Displacement, position and Proximity Sensors, Velocity and Motion Sensors, Force and Fluid Pressure Sensors, Liquid level and Flow sensors, Temperature and light Sensors, Actuators- Hydraulic, Pneumatic and electric, ADC and DAC and systems concepts, time domain analysis, frequency domain analysis, time-frequency analysis.	06
3	<b>Industrial Circuits:</b> Pneumatic Control - Different types of valves and Actuators in Pneumatics, their applications and use of their ISO symbols, Design of Pneumatic circuits using Cascade method and Shift Register Method. (Up to 3 cylinders), Design of Electro- Pneumatic Circuits using single solenoid and double solenoid valves; with and without grouping Hydraulic Control - Different types of valves and Actuators in Hydraulics, their applications and use of their ISO symbols, Meter in, meter out and Bleed off circuits. Sequencing circuits, Accumulators and their types. Applications of Accumulator circuits, Problems based on sizing and selection of Hydraulic components, Actuation technology in Hydraulic valves: Proportional and Servo Hydraulics and Digital Hydraulics. Design of Electro- Hydraulic, circuits.	12
4	<b>Programmable and Logic Controller:</b> PLC configuration and selection, PLC Basic components and their symbols Control transformers and fuses - Switches and Indicator lamps, Relays and time delay relays PLC Programming - Fundamentals of Ladder Programming, Ladder programming for logic gates and latching, Sequencing, counters, timers, shift register and Master & Jump control, Data acquisition system, Data logger, Microprocessor, Microcontroller, digital communication, digital controller, SCADA.	08
5	<b>Control Engineering:</b> Design of PD, PI and PID Controllers. Frequency Response Analysis - Frequency domain specifications for second order system, Nyquist plot State Space Analysis - State space representation of systems, Controllability and Observability, Transfer function from state space matrices Mathematical modelling of Servo systems - Armature controlled D. C. motor, Field controlled D.C. motor.	07
6	<b>Robotics:</b> Automation and Robotics, Robot types, anatomy and related attributes, accuracy, repeatability Trajectory planning, Robot control system and end effector, Sensors in robotics, Industrial application and future applications, Introduction to Artificial Intelligence.	06

### List of Experiments / Tutorials:

- 1. Using data from separate case studies, complete analysis of minimum three topics. Every student is expected to do individual and different three case studies.
- 2. Use of modern software for complete analysis of data from experimentation or a Field / online survey questionnaire. One full report may be submitted mentioning all its objectives, methodologies, inferences etc.
- 3. Assignments based on each module.

#### **Books Recommended:**

Reference Books:

### Pre-requisite: Knowledge of

1. Basic Knowledge of Algebra, Probability and Statistics.

### **Objectives:**

1. To equip the students with the expert knowledge and skills needed to apply the various quantitative techniques for decision making.

- 1. Explain significance of sensitivity analysis of LPP and Perform sensitivity analysis on various parameters involved in LP model.
- 2. Recognize the limitations of simplex method in deriving integer solution to LPP and Employ suitable algorithm to obtain integer solution.
- 3. Analyse various decision-making situations, Outline decision alternatives and Select the best alternative.
- 4. Describe a real-world problem as a Non-Linear Programming Problem and Distinguish local, global extreme points and point of inflection.
- 5. Explain significance of Markov Analysis to predict the state of a system.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction to Decision model and Quantitative techniques: Concept of decision making	08
	and decision problem, Mathematical Model of decision problem, Concept of Optimization,	
	Quantitative techniques for finding optimal solutions to decision problems.	
	Linear Programming Problem: Mathematical Formulation. Overview of Simplex Method.	
	Sensitivity Analysis.	
	Linear Goal programming: Formulation as Goal programming model, Optimal solution by	
	graphical method and simplex method.	
2	Integer Programming Problem:	06
	Types of Integer Programming Problems, Gomory's cutting plane Algorithm, Branch and Bound	
	Technique.	
3	Nonlinear programming problems (NLPP):	08
	Convex programming.	
	Unconstrained NLPP – Search Algorithm and Gradient method.	
	Constrained NLPP – Kuhn-Tucker Conditions, Geometric Programming.	
	Quadratic programming.	
4	Network Optimization Models:	06
	Shortest Path, Minimum Spanning Tree, and Maximum Flow Problems.	
5	Decision Theory:	08
	Decision Making under risk, under uncertainty, Decision Trees & Utility Theory, Bayesian	
	approach in decision making.	
	Decision Making under certainty, Introduction to concepts of AHP (Analytic Hierarchy Process)	
	& ANP (Analytic Network Process).	
6	Markov Analysis:	06
	Stochastic Process, Markov Process, Transition Probability Matrix, Markov Chain.	

# List of Experiments / Tutorials:

- 1. Exercises on LPP Software, AHP Software & others.
- 2. Exposure to other OR & Simulation software.
- 3. Live case studies / Assignments based on each module.

### **Books Recommended:**

### **Pre-requisite:**

- 1. Exposure to environmental science and engineering.
- 2. Knowledge on engineering materials and new age materials.
- 3. Knowledge of product design and product life cycle management.

### **Objectives:**

- 1. To get acquainted with concepts, various dimensions and significance of sustainability.
- 2. Acquire knowledge on emerging approaches in waste management.
- 3. Understand the ongoing trends and innovations in energy management.
- 4. Get exposure to the role of environmental management in modern business world.

- 1. Identify and deal with economic, social and technological concerns in sustainable manufacturing front.
- 2. Pursue eco-friendly approaches in managing various forms of waste including hazardous waste.
- 3. Apply environment friendly options in design and manufacturing operations to bring down carbon foot prints.
- 4. Get adequate exposure to energy efficient initiatives and energy management.
- 5. Get exposure to environmental standards/legislations and develop capability in assessing environment impact.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction:	07
	Concepts related to sustainability and sustainable development, Green expectations and global	
	sustainability agenda. Confronting climate change and global warming, Environmental	
	preservations, wake up conferences, voice of society and green movement.	
2	Waste Management:	07
	Types & sources of waste, segregation &waste processing, Green processing and engineering	
	approaches, energy recovery, life cycle approach - cost benefits, R3&R6 cycles, methods to	
	infuse sustainability in early phase of product design approach, cradle to cradle approach.	
3	Materials for Sustainability:	07
	Energy efficient and environment friendly materials. New age materials, Materials and process	
	selection, Material disposal, Material for recycling, biodegradable materials, control on non-	
	renewable material usage, integrating sustainability concepts, Toxicity and health impact.	
4	Design for Sustainability:	07
	Conversion technologies, concept of Eco-innovation, sustainable loading on ecosystems, energy	
	conservation and energy audit, environmental analysis from raw material to disposal, product life	
	cycle assessment, sustainable design approach and matrices for sustainable designs, case studies	
	on sustainable design.	
5	Environment Management:	07
	Influence of cultural, political and economic changes in transforming role of environmental	
	management in business world, Environmental standards & legislation, carbon foot print	
	assessment and carbon trading, Anti-Pollution boards, Kyoto protocol, Initiatives at national and	
	global level, Alternative product & process change and manufacturing practices, Environment	
	and human health effect hazards, mitigation management. Role of IT & communication	
	networking.	
6	Sustainability Assessment:	07
	Multi-Objective decision making, concept models and approaches, evolving sustainability issues	
	in operating strategy. Product and process sustainability and risk /benefit assessment.	
	Sustainability impact assessment, corporate social responsibilities and initiatives, sustainability	
	rating schemes, eco -labelling and energy labelling programmes, Continuous sustainability	
	awareness initiatives, Industrial case students.	

#### **List of Experiments / Tutorials:**

- 1. Using data from separate case studies, complete analysis of minimum three topics. Every student is expected to do individual and different three case studies.
- 2. Use of modern software for complete analysis of data from experimentation or a Field / online survey questionnaire. One full report may be submitted mentioning all its objectives, methodologies, inferences etc.
- 3. Assignments based on each module.

#### **Books Recommended:**

Reference Books:

- 1. Sustainable Development by M. K. Ghosh Roy Ane Books Pvt. Ltd.
- 2. Green Management by M. Karpagam, Geetha Jaikumar Ane Books Pvt. Ltd.
- 3. Essential Environmental Studies by S. P. Misra, S.N. Pandey Sheth Publishers.
- 4. Design for Environment: A Guide to Sustainable Product Development by Joseph Fiksel McGraw-Hill Companies.
- 5. E books Sustainable Manufacturing by J. Paulo Davim Wiley Publishers.
- 6. E book Sustainable Manufacturing- Shaping global value creation by Gunther Seliger Springer.

				25	25		15		10					

### Pre-requisite: Knowledge of

1. Computer-aided design & computer-aided manufacturing.

### **Objectives:**

- 1. To familiarize with importance of Rapid Prototyping in Product Development.
- 2. To make students aware about latest additive manufacturing technology used in industry.
- 3. To make students aware about various additive manufacturing processes and material availability.
- 4. To enable students to understand, describe and evaluate the different post processing techniques currently used on Additive Manufacturing parts.
- 5. To make students aware about latest research in the area of additive manufacturing.

- 1. Understand importance of Rapid Prototyping in product development.
- 2. Apply basic knowledge of additive manufacturing to decide type of additive manufacturing process and material according components design requirement.
- 3. To calculate and justify the cost of a typical additive manufacturing operation including labour costs, overhead costs, and consumable costs.
- 4. Evaluate the different post processing techniques used on AM parts, including those required for removal of support structures, improvement of surface characteristics and structural integrity.
- 5. Conduct research work and research writing in the field of additive manufacturing.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction:	08
	Product Development Cycle and the product Life Cycle, Problems in Product Development,	
	Relationship between Product Development Cost and the Selling Price, Rapid prototyping need,	
	Classification of RP systems, advantages and limitations of RP, Applications and scope of RP,	
	Introduction to additive manufacturing.	
2	Design for Additive Manufacturing:	06
	Multiple Materials, Hybrids, Functionally Graded Materials, Composite Materials, current and	
	future directions; Process Modelling of AM process- Design optimization through finite-element	
	modelling of AM- Simulation of phase transformations- heating, melting, forming, solidification	
	and finishing and rheological studies of various AM materials.	
3	Classification of Additive Manufacturing Processes:	08
	Seven Classes of Additive Manufacturing, Binder jetting, Directed Energy Deposition, Powder	
	Bed Fusion, Sheet Lamination, Material Extrusion, Material Jetting, Vat Photo Polymerization	
	Detailed discussion on latest technique available on each type of additive manufacturing	
	processes. Specification, working principal, material compatibility and Post processing.	
4	Additive Manufacturing System Design:	08
	Process selection, Material selection, labour cost involved, overhead cost calculation,	
	consumables cost, machine maintenance, Project Planning, Sensors used Jigs and fixtures,	
	Thermal management, Manufacturing Quality management.	
5	Applications of Additive Manufacturing:	06
	Aerospace Applications, Medical applications, Art and Design applications, Energy applications,	
	Architecture applications.	
6	Intellectual Property Rights, IPR in Additive Manufacturing:	06
	Case studies on latest patents in the field of additive manufacturing, Case studies based on latest	
	articles published in Scopus, SCI, and ESCI indexed journal.	

### List of Experiments / Tutorials:

- 1. Generating STL files from the CAD (Computer Aided Design) model.
- 2. Processing and Simulation of process parameters in CURA Software for optimizing build-time and material consumption.
- 3. Fabricating the component by additive manufacturing.
- 4. Use of modern software for analysis of data from experimentation/ literature. One full report may be submitted mentioning all its objectives, methodologies, inferences etc.
- 5. Assignments based on each module.

### **Books Recommended:**

Text Books:

- 1. Additive Manufacturing Technologies Ian Gibson, David W Rosen, Brent Stucker., Mahyar Khorasani Springer.
- 2. Additive Manufacturing Juan Pou, Antonio Riveiro and J. Paulo Davim Elsevier.

### Reference Books:

- 1. Multi-dimensional Additive Manufacturing Soshu Kiriharal, Kazuhiro Nakata Springer.
- 2. Additive Manufacturing Processes SanjayKumar Springer.
- 3. Polymer Based Additive Manufacturing Declan M. Devine Springer.
- 4. Materials for Additive Manufacturing Yusheng Shi, Chunze Yan, Yan Zhou, Jiamin Wu, Yan Wang, Shengfu Yu, Ying Chen Academic Press, Elsevier.
- 5. Additive Manufacturing (A Tool for Industrial Revolution 4.0) M. Manjaiah, K. Raghavendra, N. Balashanmugam, J. Paulo Davim Woodhead Publishing.

### Pre-requisite: Knowledge of

- 1. Different manufacturing processes.
- 2. Production planning and Control.
- 3. Important software tools for design and manufacturing.

### **Objectives:**

- 1. To acquaint the students with concepts of manufacturing systems engineering and design.
- 2. To familiarise the students with various manufacturing systems and approaches for various areas of applications.
- 3. To impart knowledge in design and adoption of manufacturing systems to achieve improved productivity and cost benefits.

- 1. Understand and appreciate the capabilities and limitations of various manufacturing systems.
- 2. Identify and select appropriate manufacturing systems for specific applications.
- 3. Design and implement appropriate model of manufacturing systems in specific contexts.
- 4. Cope up with the ongoing demands of the industry, specifically on the manufacturing front.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Manufacturing system fundamentals:	04
	Basic concepts and definition of system, system design, structural and transformational aspects	
	of manufacturing systems, integrated manufacturing and management systems.	
2	Process systems for manufacturing:	06
	Logistics planning and design, Product planning and design, Process planning and design,	
	Layout planning and design.	
3	Group technology and cellular manufacturing systems:	10
	Concepts of cellular manufacturing, comparison between cellular and traditional manufacturing,	
	Cell characteristics, Techniques of cellular manufacturing, Advantages and Limitations.	
	Cell design and cell formation techniques, processing of exceptional components in cellular	
	manufacturing. Evaluation of cellular manufacturing solutions, cell characteristics, Production	
	control activities in cellular manufacturing and implementation issues.	
4	Management systems for manufacturing:	08
	Managerial information flow, Aggregate production planning and scheduling, Inventory	
	management, Production control and Quality control.	
5	Automation systems for manufacturing:	07
	CAD, CAM, CIM, FMS, Computer integrated automation systems- concept of ghost factory and	
	Overview of industry 4.0.	
6	Information system for manufacturing:	07
	MIS (Management information systems), SIS (Strategic information systems), Parts oriented	
	production information systems, Online production control systems and Computer based	
	production management systems.	

#### List of Experiments / Tutorials:

### **Objectives:**

- 1. To understand the individual processes of supply chain management and their interrelationships within individual companies and across the supply chain.
- 2. To understand the management components of supply chain management.
- 3. Familiarize the students with the tools and techniques used in implementing supply chain management.
- 4. To understand how supply chain strategy can provide competitive advantage for organization.

- 1. Demonstrate the functional strategy map of supply chain management.
- 2. Analyze the determinants of Supply Chain and Transportation networks design.
- 3. Demonstrate the need of coordination and sourcing decisions in supply chain.
- 4. Understand pricing, revenue management and role of IT in supply chain.
- 5. Understand various sustainability aspects of a supply chain.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction to LSCM: Objective, Importance, Decision Phases, Process Views.	09
	Competitive and Supply Chain Strategies, Achieving Strategic Fit, Expanding Strategic Scope,	
	Challenges to Achieving and Maintaining Strategic Fit.	
	Supply Chain Drivers and Metrics: Financial Measures of Performance, Drivers of Supply	
	Chain Performance, Framework for Structuring Drivers, Facilities, Inventory, Transportation,	
	Information, Sourcing, Pricing.	
	Creating the Responsive Supply Chain: Product push versus demand pull, The Japanese	
	philosophy, The foundations of agility, A route-map to responsiveness.	
	Information Systems in Supply Chain: IT enabled SC, Best practices & benchmarking for SC,	
	towards Green SC, towards World class SCM.	
	Role of IT in Logistics management, the role of information in the virtual supply chain.	
2	Network Design in the Supply Chain:	07
	The Role of Network Design in the Supply Chain, Factors Influencing Network Design	
	Decisions, Framework for Network Design Decisions, Models for Facility Location and	
	Capacity Allocation.	
3	Designing Global Supply Chain Networks:	07
	The Impact of Globalization on Supply Chain Networks, The Offshoring Decision: Total Cost,	
	Risk Management in Global Supply Chains, Discounted Cash Flows, Evaluating Network	
	Design Decisions Using Decision Trees.	
4	Coordination and Sourcing Decisions in a Supply Chain:	07
	Lack of Supply Chain Coordination and the Bullwhip Effect, The Effect on Performance of Lack	
	of Coordination, Obstacles to Coordination in a Supply Chain, Managerial Levers to Achieve	
	Coordination, Continuous Replenishment and Vendor-Managed Inventories, Collaborative	
	Planning, Forecasting, and Replenishment.	
	The Role of Sourcing in a Supply Chain, In-House or Outsource, Third- and Fourth-Party	
	Logistics Providers, Using Total Cost to Score and Assess Suppliers, Supplier Selection-	
	Auctions and Negotiations, Contracts, Risk Sharing and Supply Chain Performance, Design	
	Collaboration, The Procurement Process.	
5	Pricing and Revenue Management in a Supply Chain:	06
	The Role of Pricing and Revenue Management in a Supply Chain, Pricing and Revenue	
	Management for Multiple Customer Segments, Pricing and Revenue Management for Perishable	
	Assets, Pricing and Revenue Management for Seasonal Demand, Pricing and Revenue	
	Management for Bulk and Spot Contracts.	
6	Sustainable Supply Chain:	06
	The Role of Triple Bottom Line, Key Metrics for Sustainability, Greenhouse gases and the	
	supply chain, Reducing the transport-intensity of supply chains, Beyond the carbon footprint,	
	Reduce, reuse, recycle, Sustainability and Supply Chain Drivers.	

### **List of Experiments / Tutorials:**

- 1. Using data from separate case studies, complete analysis of minimum three topics. Every student is expected to do individual and different three case studies.
- 2. Use of modern software for complete analysis of data from experimentation or a Field / online survey questionnaire. One full report may be submitted mentioning all its objectives, methodologies, inferences etc.
- 3. Assignments based on each module.

#### **Books Recommended:**

Reference Books:

### Pre-requisite: Knowledge of

1. Mechanical Vibrations.

### **Objectives:**

- 1. To introduce parameters involved in machine health monitoring management.
- 2. To make students aware about Instrumentation and Signal Processing in machine health monitoring management.
- 3. To introduce importance of pattern recognition in machine health monitoring management.
- 4. To impart knowledge about the application of artificial intelligence techniques in Condition monitoring.
- 5. To impart knowledge about the application of Machine learning techniques in Condition monitoring.

- 1. Understand basics of machine health monitoring management.
- 2. Apply basic Instrumentation and signal processing technique in machine health monitoring management.
- 3. Recognize pattern in problems involved in machine health monitoring.
- 4. Gain knowledge about the application of artificial intelligence techniques in Condition monitoring.
- 5. Gain knowledge about the application of Machine learning techniques in Condition monitoring.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction to Asset Management: Digital Asset Management, Fixed Asset Management, IT	08
	Asset Management, Enterprise Asset Management, Financial Asset Management, Infrastructure	
	Asset Management.	
	Planned Maintenance Condition Based Maintenance, Pasponsive Maintenance, Emergancy	
	Maintenance.	
2	Introduction to Machine Health Monitoring Management: Machine failures, Maintenance	08
	strategies, machine condition monitoring, Vibration signatures of faults in rotating and	
	reciprocating machines, detection and diagnosis of faults.	
	Fracture mechanics: LEFM, EPFM, Stress intensity factor, crack identification, crack	
	propagation, residual life, residual life determination, Airy's stress function, Westguard's	
	solution.	
3	Instrumentation and Signal Processing:	06
	Types of sensors used in machine health monitoring: vibration, acoustics and noise, acoustic	
	emission, temperature, ultrasonic and infrared sensors - Signal processing: basic signal and	
	systems concepts, time domain analysis, frequency domain analysis, time-frequency analysis.	
4	Pattern Recognition:	08
	Feature extraction and feature selection methods, feature reduction using PCA - discriminant	
	functions and decision boundaries, decision trees, maximum likelihood and nearest neighbour.	
	Application and case studies of machine health monitoring: Bearings, gear boxes, engines,	
	structural health monitoring, machine tool condition monitoring etc.	0.6
5	Introduction to Condition Monitoring Using Artificial Intelligence:	06
	Approaches to Condition Monitoring, Components of Condition Monitoring, Measurement	
	System and Pre-processing, Feature Extraction, Statistical Features, Vibration-based Condition	
	Hybrid AI Approaches	
6	Introduction to Machine Learning in Conditioning Monitoring.	06
v	Machine Learning Tools Artificial Neural Network Support Vector Machine Extension Neural	VU
	Network, Fuzzy ARTMAP. Introduction to Incremental Learning and its Application to	
	Condition Monitoring.	
L

### **Pre-requisite:** Knowledge of

1. Basic courses in Mechanical Engineering.

### **Objectives:**

1. To provide students with a comprehensive understanding of the smart industry concept, Industry Revolution and Industry 4.0, key drivers and technologies for Smart Industries and Implications of Smart Industry.

- 1. Understand the basic principles behind smart industry.
- 2. Identify smart industry key levers and drivers.
- 3. Understand the supporting technologies for Smart factories.
- 4. Learn from leading industries and develop smart factory roadmaps.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction to Smart Industry:	06
	Traditional Manufacturing Practices and Limitations, Industry Revolution, Introduction to Fourth	
	Industrial Revolution and Concept of Smart Industry, Journey of Smart Industry, Key Drivers of	
	smart industry/Industry 4.0, Changing Society, Product and Processes, Need for renovating and	
	standardizing production and manufacturing Industries to compete with global challenges, Smart	
	Industry Roadmap, Opportunities and Challenges.	
2	Supporting Tools and Technologies for Smart Industries – Part I:	06
	Introduction to and Use of following Technologies in Smart Industries: Industrial IOT, Sensing	
	and actuation, Autonomous Robots, Additive Manufacturing, Horizontal and Vertical System	
	Integration.	
3	Supporting Tools and Technologies for Smart Industries – Part II:	10
	Introduction to and Use of following Technologies in Smart Industries: AI, Cloud Computing,	
	Big Data and advanced analytics, ICT, Block chain technology, smart grids, Cyber Physical	
	Systems, Augmented Reality and Virtual Reality in Smart Factories.	
4	Dimensions of Smart Manufacturing and Logistics:	10
	Smart Manufacturing: Smart and connected products, Smart machines, Smart materials, Smart	
	manufacturing processes, Smart material handling, Sustainable manufacturing and renewable	
	energy.	
	Smart Logistics: Marketing and sales, post sales service and customer relationship management,	
	Smart Money: Digital payment strategy in India.	
5	Real Time Tracking and Machine monitoring:	05
	Real time tracking of parts, WIP, tools, personnel and associated tools and challenges.	
	Purpose of machine monitoring, tools and functions involved in predictive maintenance of	
	machines.	
6	Smart Industry Applications with Case Studies:	05
	Discussion on case studies and success stories across industries who had developed and	
	implemented several smart factory solutions.	

## List of Experiments / Tutorials:

- 1. Using data from separate case studies, complete analysis of minimum three topics. Every student is expected to do individual and different three case studies.
- 2. Use of modern software for complete analysis of data from experimentation or a Field / online survey questionnaire. One full report may be submitted mentioning all its objectives, methodologies, inferences etc.
- 3. Assignments based on each module.

### **Books Recommended:**

### Text Books:

1. Handbook of Industry 4.0 and SMART Systems, Diego Galar Pascual, Pasquale Daponte and Uday Kumar, CRC Press.

## Reference Books:

### Pre-requisite: Knowledge of

1. Domain knowledge of any Program Specific Outcome (PSO) of the curriculum.

### **Objectives:**

1. To realize the functional solution as per the project requirements.

**Outcomes:** On completion of the course, learner will be able to:

- 1. Incorporate project-based learning that allows students to identify and transfer existing ideas into new applications.
- 2. Present their project work in a technical report improving their documentation skills.
- 3. Integrate inter-disciplinary concepts, which help them to get internships, jobs, admission for higher studies.
- 4. The project will serve as a pre cursor to his/her M. Tech thesis dissertation topic.

#### Syllabus:

Domain knowledge (any field of knowledge and beyond) needed from the various areas of UG & PG curriculum for the effective **interation** of the product. These areas can be updated (expanded), based on the needs of technological innovations and development needed for a specific project.

#### **Evaluation Scheme:**

Every student performance will be reviewed once in a semester by review panel formed by the Head of Department. The evaluation will be based on the following criteria:

1. Project progress
- 2. Documentation/Technical paper writing
- 3. Overall presentation and Teamwork
- 4. Validation of results (functional testing results)
- 5. Project Development with a view leading to his/her M. Tech thesis.

Marks scored in the mid-semester review will be considered as a part of the term work.

The final certification and acceptance of Term work ensures satisfactory performance and the outcome of evaluation centered about evaluation scheme.

## Pre-requisite: Knowledge of

1. Statistical Signal Processing.

## **Objectives:**

- 1. To To introduce students to the basic concepts and techniques of Machine Learning.
- 2. To become familiar with regression methods, classification methods and clustering methods.
- 3. To introduce students to the basics of Genetic Algorithms.

- 1. Analyze the applications, which can use Machine Learning Techniques.
- 2. Understand and Apply regression, classification and clustering methods to the database.
- 3. Interpret the difference between supervised and unsupervised learning methods.
- 4. Understand the working of Reinforcement learning.
- 5. Understand basic concepts of Genetic Algorithms.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction to Machine Learning:	07
	Machine Learning Terminologies, Types of ML, Goals and Applications of ML, Choosing the	
	right Algorithm.	
	Designing a Learning System: The concept learning task, concept learning as search General to	
	specific ordering of hypothesis, Find-S, Candidate elimination Algorithm.	
2	Regression and Tree based Learning:	07
	Linear Regression, Logistics Regression.	
	Introduction, Decision tree representation, appropriate problems for decision tree learning, basic	
	decision tree algorithm, hyperspace, search in decision tree learning, issues in decision tree	
	learning.	
3	Probability and Instance based Learning:	07
	Probability theory and Bayes rule, Naive Bayes learning algorithm.	
	Introduction, K-nearest neighbour learning, case-based learning, radial basis functions.	
4	Clustering and Unsupervised Learning:	07
	Learning from unclassified data, K-means Clustering, Expectation maximization Algorithm,	
	Semi supervised learning with EM using labelled and unlabelled data.	
	Supervised Learning after clustering, Choosing number of clusters.	
5	Supervised and Reinforcement Learning:	08
	Techniques of Supervised Learning: Supervised Learning Overview, Linear Model (Numerical	
	Functions), Perceptron Learning Algorithm (PLA) - Classification, From Linear to Nonlinear,	
	Adaptive Perceptron Learning Algorithm (PLA), Classification, Support Vector Machine	
	(SVM), Extension to Multi-class Problems.	
	Reinforcement Learning: Overview, Example and Uses.	
6	Genetic Algorithms:	06
	Genetic Algorithms: Introduction, genetic operators, genetic programming, models of evolution	
	& learning, parallelizing genetic algorithm.

### **Objectives:**

1. Understand the renewable energy resources availability, potential and suitability as a substitute for conventional energy resources in future energy demand.

- 1. Identify sustainable energy solutions for sustainable development.
- 2. Analyze renewable energy resources availability and utilization.
- 3. Demonstrate competency in renewable systems analysis independently.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction: Renewable and non-renewable energy sources, global and Indian scenario.	05
	Energy alternatives: The solar option, nuclear option, tar sands and oil shale, tidal energy,	
	geothermal energy.	
2	Solar energy: Solar radiation, availability, measurement and estimation, solar thermal	09
	conversion devices such as flat plate collector, tubular collector, solar air collector, solar	
	concentrator and storage.	
	Applications: Crop drying, distillation, water heating, electric power generation.	
	Solar photovoltaic: Photovoltaic cell technologies, generations of solar cell, electrical	
	characteristics, photovoltaic module and array, photovoltaic module system components and	
	design.	
3	Biomass energy conversion:	09
	Biomass characteristics and their availability, biofuel production processes, bio-methane, bio-	
	hydrogen, alcoholic fermentation, biodiesel, microbial fuel cell, biomass-based steam power	
	plant, combined cycle power plant, cogeneration plant, Energy from Waste.	
4	Wind energy: Wind turbines, aerodynamics, types of turbines wind energy conversion system,	08
	wind turbine generator types, advantages and disadvantages.	
	Hydro power: Water turbines, hydroelectric system theory, measurement and components,	
	advantages and disadvantages of hydroelectric system.	
5	Geothermal energy: Structure of earth, geothermal resources, exploration of geothermal energy.	06
	OTEC: Principle, applications.	
	Tidal: Principle, power calculation, tidal modes of operation.	
	Wave: Wave motion, energy conversion and devices applications.	
6	Economic analysis:	05
	Initial and annual costs, present worth calculation, annual savings, payback period.

## Pre-requisite: Knowledge of

1. Marketing.

## **Objectives:**

- 1. To learn the fundamentals of Digital marketing.
- 2. To understand the use of content strategy and social media marketing and email marketing.
- 3. To understand the role of Search Engine Optimization.
- 4. To apply techniques in display advertising.

- 1. Apply B2B and B2C contexts to plan content marketing.
- 2. Develop and measure impact of content that works well for your target audience.
- 3. Manage social media presence, and create effective content for each platform.
- 4. Optimize search engine presence through on-site and off-site activities, develop target keyword list, optimize website UX and design, and execute a link building campaign.
- 5. Create, execute, and optimize an effective Ad campaign. Display and set up advertising works.
- 6. Create an email marketing strategy, create and execute email campaigns, and measure the results.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Marketing Fundamentals:	08
	Welcome to Digital Marketing, The Digital Marketing Framework, What: Your Business	
	Welcome to Digital Marketing, The Digital Marketing Framework, What: Your Business Who&	
	When: Your Customer, Where: Marketing Channels, why: Marketing Objectives & KPIs.	
2	Content Strategy:	08
	Plan Your Content Strategy, Create Content, Distribute & Promote Content, Optimize Website	
	UX & Landing Pages, Measure Impact.	
3	Social Media Marketing:	08
	Social Media Marketing (Organic), Social Media Landscape, Social Media Channels, Social	
	Media Content, Implement & Monitor Campaigns, Measure Impact, Social Media Advertising	
	(Paid), Intro to Social Media Advertising, Platforms for Social Ads, Facebook - Getting Started,	
	Facebook - Create Ad Sets, Facebook - Create and Manage Ads.	
4	Search Engine Optimization (SEO):	06
	Search Engine Marketing with AdWords (SEM), How Search Works Keywords, On-Site SEO:	
	Optimize UX & Design, Off-Site SEO:Link-building, SEO Audit & Future of SEO, Adwords &	
	Keyword Selection, Create Text Ads, CPC Bidding, Navigate AdWords, SEM Metrics &	
	Optimization.	
5	Display Advertising:	06
	How Do Display Ads Work? Display Ads & Targeting, Sales Models, Display Ads in AdWords,	
	Video Advertising.	
6	Email Marketing:	06
	Email List Generation, Create an Effective Email Campaigns, and Create an Email Plan,	
	Measure Results.

## **Objectives:**

- 1. Identify key areas of concern over Project Life Cycle (PLC) and use of project management principles across all the phases of PLC.
- 2. Make them understand the importance and necessity of project plan.
- 3. Make them understand the importance of team and how to work as a team member, share best project management practices.

- 1. Assess a project by establishing a business case and accordingly prepare a project proposal.
- 2. Develop a project plan.
- 3. Identify task inter-dependencies, construct and analyze a network diagram.
- 4. Monitor and control the performance of the project.
- 5. Demonstrate Team work and team spirit and resolve conflicts.

Detall		
Unit	Description	Duration
1	An overview of Project Management:	05
	What is project? Characteristics of project, Project Vs Operations, Project Goals, Project Life	
	Cycle (typical & atypical), Evolution of Project Management, Need of Project Management,	
	Different forms of Project Management, Project Environment, PMBOK. Remote (Virtual)	
	Project Management: Introduction, benefits, challenges, tools for remote project management.	
2	Project Initiation and Planning:	05
	Project Feasibility, Request for Proposal (RFP), Business Case, Project selection and approval	
	process, Project Proposal, Project Contracting. Planning steps, Project Management Process,	
	Project Charter, Project Planning Framework, Work Breakdown Structure (WBS), Linear	
	Responsibility Chart, Gantt Chart.	
3	Project Time Management:	07
	Network Diagrams (AOA&AON), Critical Path, PDM network, PERT, CPM, Resource	
	Loading, Resource Leveling, Goldratt's Critical Chain.	
4	Project Cost Management:	04
	Cost estimating, Cost escalation, Cost estimating and system development cycle, Cost estimating	
	process, Elements of budgets and estimates, Top down and bottom-up budgeting, Project cost	
	accounting and MIS, Budgeting using cost accounts, Cost schedules and forecasts.	
5	Project Human Resource Management:	06
	Formal & Informal organization, project team, multidisciplinary teams, project leadership, ethics	
	in projects, multicultural projects, Role of project manager. The nature of change, the change	
	management plan, dealing with resistance and conflicts. Remote collaboration and its current	
	state, future prospect of remote collaboration, managing remote teams effectively.	
6	Project Communication Management:	05
	Monitoring and controlling the project, the project communications plan, project metric – Earned	
	Value Management, data collection and reporting, reporting performance and progress,	
	information distribution.	
7	Project Risk Management, Project Quality Management:	05
	Basic concepts, Identification, Assessment, and Response plan. Quality Planning, Quality	
	Assurance, Quality Control.	
8	Project Procurement Management and Project Closure:	05
	Introduction, project procurement management, outsourcing. Project implementation,	
	administrative closure, project evaluation.

## Pre-requisite: Knowledge of

1. Research concepts.

## **Objectives:**

- 1. To understand Research and Research Process.
- 2. To acquaint students with identifying problems for research and develop research strategies.
- 3. To familiarize students with the techniques of data collection, analysis of data and interpretation.

- 1. Understand research concepts, types, significance and importance of research profile.
- 2. Prepare a preliminary research design for projects in their subject matter areas.
- 3. Accurately collect, analyze and report data.
- 4. Review and analyze research findings.
- 5. Prepare the research report.

Detail	ed Syllabus: (unit wise)	
Unit	Description	Duration
1	Introduction and Basic Research Concepts: Meaning of Research, Objectives of Research,	07
	Types of Research, Significance of Research, Research Methods versus Methodology, Criteria of	
	Good Research, Problems Encountered by Researchers in India.	
	Creating Research Profile: Google Scholar, ResearchGate, ORCID and Publons.	
2	Defining the Research Problem: Identifying and Selecting the Research Problem, Necessity of	09
	Defining the Research Problem, Technique Involved in Defining a Problem, Importance of	
	literature review in defining a Research Problem, Literature review from primary and secondary	
	sources, research databases, institution repository, searching the web, critical literature review,	
	identifying research gap areas from the literature, developing theoretical background and	
	research framework.	
	Research Design: Meaning, Types and Significance.	
	Research Questions and Hypothesis: Variables and their linkages, characteristics of a good	
	Hypothesis, Research question and formulation of Research hypotheses, Basis for hypotheses.	
3	Sample Design: Sample Design – Meaning and Significance, Essentials of a good sampling.	07
	Stages in Sample Design, Sampling methods/techniques, Sampling Errors.	
	Measurement and Scaling: Classifications of Measurement Scales, Sources of Error in	
	Measurement, Scaling, Scale Classification Bases, Scaling techniques, Deciding the Scale.	
4	Data Collection and Analysis:	06
	Sources of Data, Types of Data, Methods of Collecting Data, data processing and analysis with	
	statistical packages, hypothesis testing, generalization and interpretation.	
5	Research Writing: Synopsis, Article/Research Paper, Research Proposal for funding agencies,	07
	Thesis, Dissertation, Book-Chapter.	
	Layout, structure and format of a Research Report, Criteria of Good Research Writing,	
	Precautions for Writing Research Reports, Patent possibilities. Software for paper formatting,	
	like LaTeX/MS Office.	
	Indexation & Citation Style: Concept of Indexing, Indexed by Scopus, PubMed, EBSCO, Web	
	of Science, ISI Indexing, etc.	
	MLA, APA, IEEE, ISO, Chicago, etc. style of citation in Bibliography, Reference Management	
	Software like, Zotero, Mendeley, etc.	
	Publications from Research: Identifying the relevant journal and its publisher, predatory	
	journals, Journal Rankings, Research presentation in Conferences, Conferences proceedings.	
6	Research Ethics: Research Ethics, Importance of Research Ethics, Scientific Misconduct,	06
	Similarity check (Turnitin, Quetext, Plagiarism Detector, Ouriginal software) and Their	
	Prevention, Acknowledgement.	
	IPR: Intellectual Property Rights and patent law, commercialization, copy right, royalty, trade	
	related aspects of intellectual property rights (TRIPS).

## **Pre-requisite:** Knowledge of

- 1. Product development process.
- 2. Environmental science.

# **Objectives:**

- 1. To familiarize the students with the need, benefits and components of PLM.
- 2. To acquaint students with Product Data Management & PLM strategies.
- 3. To give insights into new product development program and guidelines for designing and developing a product.
- 4. To familiarize the students with Virtual Product Development.

- 1. Gain knowledge about phases of PLM, PLM strategies and methodology for PLM feasibility study and PDM implementation.
- 2. Illustrate various approaches and techniques for designing and developing products.
- 3. Understand the need for Product Life Cycle Assessment (LCA) and Life Cycle Cost Analysis.
- 4. Demonstrate the various PLM Applications, Modules, and virtual product development tools for components, machining and manufacturing plant.
- 5. Appreciate the significant effect of effective marketing strategies and integration of PLM with other business modules.

Detaile	d Syllabus: (unit wise)	
Unit	Description	Duration
1	Fundamentals of Product Life Cycle Management (PLM):	10
	Overview of product and product life cycle (PLC), background and concept of	
	product life cycle management (PLM), Need for PLM, Elements/components of	
	PLM, PLM paradigm and environment, Internal and external factors affective PLM,	
	phases involved in PLM, PLM life cycle model and implementation (case study)	
	PLM strategies and principles, organization's visions in line with PLM, strategy	
	identification and selection, change management for PLM etc.	
2	Product Design and Development:	08
	Product, Product structure, product design process and product analysis, New	
	Product design and it's need, organization and decomposition in product design,	
	Design for X and Robust design, Strategies for recovery at end of life, recycling,	
	human factors in product design and concurrent engineering etc.	
	What is product development?	
	New product development - strategies and process, and successful product	
	development.	
3	Product Life Cycle Assessment (LCA) and Life Cycle Cost Analysis:	07
	Detailed methodology, ISO framework and phases of LCA, Application, benefits and	
	limitations of LCA, Cost Analysis and the Life Cycle Approach, General Framework	
	for LCCA, Evolution of Models for Product Life Cycle Cost Analysis.	
4	PLM applications and software solutions:	06
	Industry/Product specific Applications of PLM.	
	Product Data Management (PDM) - concept and implementation, Product portfolio	
	management, computer aided design and manufacturing, Digital manufacturing,	
	Product modelling and simulations.	
	(Industry case studies and examples to explain the benefits of PLM and related	
	software tools)	
5	Integrating PLM Systems with other Aspects of Business and Environment:	07
	Integration of PLM systems with Supply Chain Management, Enterprise resource	
	planning, industry 4.0, Sustainable product development and Design for environment	
	etc.	
6	Effective Marketing Strategies to Improve Life Cycle of Product:	04
	Understanding marketing, Role of marketing in PLC and organization performance,	
	Identifying business opportunities through market analysis, Consumer/Buyer	
	behavior pattern etc.	
	Developing effective marketing strategies – Differentiating and Positioning product,	
	developing new product, product lines and width, pricing strategies, Market	
	segmentation and Identifying target market, Advertising, branding, customer	
	relations and managing market channels.

### **Guidelines for Skill Development Course:**

- 1. The NPTEL online credit course should to be finalized by the student in consultation with the project guide/supervisor.
- 2. The course shall be of advanced or recent topics and should be relevant to the area of the project selected.
- 3. The selected NPTEL course should have a duration of 12 weeks or more.
- 4. The NPTEL course will be considered equivalent to 3 credits for course mentioned in 3 above.
- 5. NPTEL courses of 4 or 8 weeks will not be considered for credit transfer.
- 6. Students should register and complete the course and examination in semester III itself.
- 7. Only scores above 40% will be considered for grant of credits.
- 8. The student is required to share his exam score with the institute

### **Guidelines for Internships/On Job Training:**

- 1. Students can take up internship/training programme in industry related to their Computer Engineering.
- 2. The number of hours required to be engaged should be a minimum of 12 hours weekly.
- 3. The duration of the internship should be 3 months at least.
- 4. Students should compile the report in standard format and present it in front of a Panel of Examiners.

#### **Guidelines for Assessment of Internships:**

- 1. Work done during the internship should be assessed jointly by a panel of Internal Examiners.
- 2. A power point presentation along with report should be presented in from of the panel members.
- 3. Feedback from the reporting manager of the student in the industry should evaluated.
- 4. Internship should be assessed based on the following points:
  - Quality of work done during the internship
  - Students understanding of the work
  - Quality of Report and Oral Presentation
  - Feedback from Internal guide and Reporting manager from industry

#### **Guidelines for Special Topic Research Seminar:**

- 1. Special Topic Seminar should be based on thrust areas in Mechanical Engineering.
- 2. Students should do literature survey, identify the topic of seminar and finalize it with consultation of Guide/Supervisor.
- 3. Students should use multiple literatures (at least 10 papers from Refereed Journals/conferences) and understand the topic and research gap.
- 4. Students should compile the report in standard format and present it in front of a Panel of Examiners (Pair of Internal and External examiners).

## Guidelines for Assessment of Special Topic Research Seminar:

- 1. Special Topic Seminar should be assessed jointly by a pair of Internal and External Examiners.
- 2. Special Topic Seminar should be assessed based on the following points:
  - Quality of Literature survey and Novelty in the topic
  - Relevance to the specialization
  - Understanding of the topic
  - Quality of Written and Oral Presentation

	20		6	Oral	Practical	Oral & Practical	Laboratory Work		Tutorial / Mini project / presentation/ Journal		Term work	100			
										100	100				

## **Guidelines for Dissertation Phase I**

Students should do literature survey and identify the problem for Dissertation and finalize it in consultation with Guide/Supervisor. Students should use multiple literatures and understand the problem. Students should attempt solution to the problem by analytical/simulation/experimental methods. The report should be compiled strictly as per the standard report writing guidelines.

## Guidelines for Assessment of Dissertation Phase I

- 1. Dissertation Phase I will be assessed by a panel of internal examiners. The assessment will consist of a midsemester review/progress evaluation for 50 marks and an end semester progress evaluation for 50 marks.
- 2. Dissertation Phase I should be assessed based on the following points:
  - Quality of Literature survey and Novelty in the problem
  - Clarity of Problem definition and Feasibility of problem solution
  - Relevance to the specialization
  - Clarity of objective and scope

## **Guidelines for Dissertation Phase II**

Students should attempt solution to the identified problem by analytical/simulation/experimental methods. The solution is to be validated with proper justification and the thesis should be compiled strictly as per the standard report writing guidelines.

## **Guidelines for Assessment of Dissertation Phase II**

Dissertation phase II will be assessed by a panel of internal examiner/guide and external examiner, appointed by the Research Approval Committee (RAC). The assessment will be based on the final thesis and the presentation. Prior to evaluation of the final thesis, assessment at the institute level will be carried out by the Research Approval Committee.

## The final presentation and the thesis should highlight the following points of the project:

- Literature survey
- Problem definition
- Research and Design
- Execution
- Experimental and Simulation results
- Conclusion and future work
- Published material (Publications in reputed conference / journals is mandatory)
